*Applied Data Science in Tourism* Roman Egger, 2022-01-31

Access to large data sets has led to a paradigm shift in the tourism research landscape. Big data is enabling a new form of knowledge gain while, at the same time, shaking the epistemological foundations and requiring new methods and analysis approaches. It allows for interdisciplinary cooperation between computer sciences and social and economic sciences and complements the traditional research approaches. This book provides a broad basis for the practical application of data science approaches such as machine learning, text mining, social network analysis, and many more, which are essential for interdisciplinary tourism research. Each method is presented in principle, viewed analytically, and its advantages and disadvantages are weighed up; typical fields of application are presented. The correct methodical application is presented with a how-to approach together with code examples, allowing a wider reader base, including researchers, practitioners, and students entering the field. The book is a very well-structured introduction to data science, not only in tourism and its methodological foundations, accompanied by well-chosen practical cases. It underlines an important insight: data are only representations of reality; you need methodological skills and domain background to derive knowledge from them.

Hannes Werthner, Vienna University of Technology

Roman Egger has accomplished a difficult but necessary task: make clear how data science can practically support and foster travel and tourism research and applications. The book offers a well-taught collection of
