Law and Economics of Justice Klaus Mathis,Avishalom Tor,2024-04-30 While previous volumes have examined specific issues and developments such as the coronavirus crisis or digital transformation from a law and economics perspective the anniversary edition returns to the methodological and philosophical fundament of the discipline of law and economics The present book aims to examine these foundations in general and in particular efficiency reciprocity and meritocracy and their relation to law and justice from an interdisciplinary perspective Efficiency Traditionally the economic analysis of law has been guided by the goal of efficiency Economists usually define efficiency as Pareto or Kaldor Hicks efficiency Any change that makes one member of society better off without anyone else being worse off is a Pareto improvement A change is a Kaldor Hicks improvement if the gainers value their gains more than the losers value their losses with only hypothetical compensation required Reciprocity Economists have traditionally based their models on the self interest hypothesis of homo oeconomicus In this model an individual maximises his own utility without being altruistic or jealous Behavioural economics challenges the self interest hypothesis In fact many people deviate from purely self interested behaviour There are also signs that considerations of fairness and mutual benefit are important in bilateral negotiations and in the functioning of markets Meritocracy The concept of meritocracy refers to a system organisation or society in which people are selected and promoted to positions of success power and influence on the basis of their abilities and merits This means that an individual is able to climb the social ladder through hard work Moreover meritocracy directs the most talented people into the most functionally important positions thereby increasing a society s efficiency However the equalising function of meritocracy has been criticised Rather than reducing inequality meritocracy is seen as the cause of racial economic and social inequality

Artificial Intelligence for Legal System Smita Gupta,Namita Singh Malik,Ardyllis Alves Soares,B. Balamurugan,Sneha Dhillon,2025-12-10 Artificial intelligence and technological advancements are continuously transforming the discipline of law in contemporary times This book offers practical insights to the reader as to how technology is influencing the judicial and criminal justice system throughout the world It includes case studies

explaining and depicting real time application of legal technological advancements from different countries Examining how data driven approaches such as big data analytics and data mining are revolutionizing legal practices including legal research case prediction and decision support systems Investigating the use of artificial intelligence technologies such as chatbots virtual assistants and document automation in legal processes including contract review legal document drafting and client interaction Exploring how blockchain technology is being implemented in areas such as smart contracts evidence management and secure data sharing enhancing transparency security and efficiency in the legal field Addressing the ethical considerations and challenges associated with the use of AI in the legal profession including issues of bias privacy accountability and the need for ethical frameworks and guidelines Analyzing the potential influence of emerging technologies such as quantum computing internet of things IoT and augmented reality on legal practices court proceedings and dispute resolution mechanisms The book is useful for researchers scholars and practitioners working in Law Technology and Information Technology
