Huixuan Zhou, Feng Jiang, Yi-lang Tang, 2024-05-28 Health related behaviours play positive or negative roles in people's health. For instance, health risk behaviours such as sedentary behaviours e.g. binge watching TV and playing computer games, the use of alcohol, tobacco or other substances and lack of sleep have been found to negatively affect the physical and mental health of people. On the other hand, some studies show that health promoting behaviours such as physical activity and healthy dietary habits can mitigate or reverse the negative effects of health risk behaviours on health outcomes. In the meantime, some studies indicate that the harmful effects of some health risk behaviours may not be mitigated by health promoting behaviours. For instance, some studies show that sedentary behaviours and physical activity are independently associated with some physical and mental health outcomes. Interventions to increase physical activity with and without decreasing sedentary time lead to different health outcomes. Clearly, more research is needed to show the interaction between health promoting behaviours and health risk behaviours in health, which could shed light on the management of health related behaviours.

Knowing Bodies, Moving Minds Liora Bresler, 2013-11-11 This book aims to define new theoretical, practical and methodological directions in educational research centered on the role of the body in teaching and learning. Based on our phenomenological experience of the world, it draws on perspectives from arts education and aesthetics as well as curriculum theory, cultural anthropology and ethnomusicology. These are arenas with a rich, untapped cache of experience and inquiry that can be applied to the notions of schooling, teaching and learning. The book provides examples of state-of-the-art empirical research on the body in a variety of educational settings. Diverse art forms, curricular settings, educational levels and cultural traditions are selected to demonstrate the complexity and richness of embodied knowledge as they are manifested through institutional structures, disciplines and specific practices.

Handbook of Pain and Palliative Care Rhonda J. Moore, 2019-06-12 This comprehensive revision of the invaluable reference presents a rigorous survey of pain and palliative care phenomena across the lifespan and across disciplines. Grounded in the biopsychosocial viewpoint of its predecessor, it offers up-to-date understanding of assessments and interventions for pain, the communication of pain, common pain conditions and their mechanisms, and research and policy issues. In keeping with the current public attention to painkiller use and misuse, contributors discuss a full range of pharmacological and non-pharmacological approaches to pain relief and management. And palliative care is given expanded coverage with chapters on interventional, ethical and spiritual concerns. Pain, intercultural communication and narrative medicine. Assessment of pain, tools, challenges and special populations. Persistent pain in the older adult. Practical considerations for evaluation and management. Acute to chronic pain transition in the post-surgical patient. Evidence-based pharmacotherapy of chronic pain. Complementary and integrative health in chronic pain and palliative care. The patient's perspective of chronic pain. Disparities in pain and pain care. This mix of evolving and emerging
