e.g. when they are leaders on a market and create barriers to entry for competitors. Another related issue is covered in chapter 6 which discusses existing ways for ISPs to circumvent the packet based rules and behave non neutral without breaking the written law. Chapter 7 gives more insight on the role and possible non neutral behavior of search engines leading to another debate called the search neutrality debate. Chapter 8 focuses on e-commerce platforms and social networks and investigates how they can influence users actions and opinions. The issue is linked to the debate on the transparency of algorithms which is active in Europe especially. Chapter 9 focuses on enforcing neutrality in practice through measurements indeed setting rules requires monitoring the activity of ICT actors in order to sanction non appropriate behaviors and be proactive against new conducts. The chapter explains why this is challenging and what tools are currently available. Eventually Chapter 10 briefly concludes the presentation and opens the debate.
