Google Maps Near Me Customer Service:

Data-Driven Personalisation in Markets, Politics and Law Uta Kohl, Jacob Eisler, 2021-07-29 This book critiques the use of algorithms to pre-empt personal choices in its profound effect on markets, democracy and the rule of law **Frontiers of Digital Transformation** Kazuya Takeda, Ichiro Ide, Victor Muhandiki, 2021-05-18 Proposing the concept of real world data circulation RWDC, this book presents various practical and industry-related studies in human, mechanical and social data domains. RWDC is a new field of study established by the information technology (IT) community. In the real world, the speed of data transmission between computers surpassed that of human communications long ago and has since expanded exponentially. As a result, the origin of the majority of data has become non-human, mechanical or natural sources; in fact, humans are merely the source of a small part of the current data explosion. Such expanding data transmission does not simply consist of single source-destination pairs but actually circulates over a complex network connecting numerous sources and destinations. Such circulation is an important aspect of the underlying systems. Based on this concept, in order to tame and control the massive amount of data originating from non-human sources, the authors have been considering the insertion of acquisition, analysis and implementation processes in the flow of data circulation. This book introduces the outcome of the RWDC degree program organized at Nagoya University, Japan, collecting contributions from graduate students enrolled in the program from various research fields targeting diverse applications. Through examples of RWDC, the resulting creation of social value is illustrated. This book will be useful not only for those working on the topics discussed but also to anyone who is interested in RWDC, digital transformation and Industry 4.0 Digital Marketing for Absolute Beginners: Jonathan K.
