College Rankings Guide Customer Service:

Customer Service in Academic Libraries Stephen Mossop, 2015-10-06 The term customer service is not new to the academic library community. Academic libraries exist to serve the needs of their community and hence customer service is essential. However, the term can be applied in a variety of ways, from a thin veneer of politeness to an all-encompassing ethic focussing organisational and individual attention on understanding and meeting the needs of the customer. For customers, the library's Front Line team is the human face of the library. How well they do their job can have a massive impact on the quality of the learning experience for many students and can directly impact upon their success. The importance of their role and the quality of the services they offer should not be underestimated, but in an increasingly digital world and with potentially several thousand individuals visiting every day, whether in person or online, each with their own agendas and requirements, how can the library's Front Line team deliver the personal service that each of these individuals need? Customer Service in Academic Libraries contributes to what academic libraries as a community do really well: the sharing of best practice. It brings together in one place examples of how Front Line teams from libraries across a wide geographical area (Hong Kong, Australia, Turkey, and the United Kingdom) work to get it right for their customers. Between them, they cover a range of institutions, including research-intensive, mixed HE/FE, private establishments, and shared campuses. All have their own tales to tell, their own emphases, their own ways of doing things, and all bring their own examples of best practice, which it is hoped readers will find useful in their own context. Discusses customer service in a library setting. Translates management theory into useful practice information. Examines building relationships, meeting customer needs, and marketing and communication. Provides examples of practical experience grounded in recent transferable experience.

University Rankings, Diversity, and the New Landscape of Higher Education, 2019-02-18 University rankings are a relatively new phenomenon in higher education. Although quite an established practice in the U.S., it is only within the last decade that attempts to analyse university performance have spread to the rest of the world, and that we also have seen new global rankings appear. Rankings attempting to measure university performance beyond national borders. No wonder that this trend is accompanied by a growing interest in studying rankings throughout the world. This book is written as part of the effort to better understand rankings and their effects on higher education. A serious approach towards university rankings implies that rankings should be analysed properly, including the methods used and the indicators chosen, and investigate the objectives claimed. If university rankings are considered as consumer information, then everyone should have an interest in basing such guidance on valid and reliable data and methodology. A serious analysis should also discuss the wider implications of rankings as an emerging phenomenon in higher education. Consequently, the contributions to this book investigate and analyse how different

rankings work how they reach their conclusions and on what data and methodology they are built Furthermore it provides a critical reflection about the impact of rankings on higher education how and in what way rankings influence policy making the structure of the sector or the internal life of the sector **College Education Version 2.0** Lisa Guernsey,1998-06
