force driving people to embrace wireless computing is Wi-Fi. Once dismissed as a fad, Wi-Fi is rapidly becoming ubiquitous in the US and around the world. In 2004, more than half of all laptops sold in the US shipped with Wi-Fi installed. By 2007, most analysts predict that nearly every laptop sold in the US will include Wi-Fi. Nearly 20 million Wi-Fi access points will be sold this year, up 20% from last year. As these numbers grow, prices will continue to fall, making Wi-Fi more attractive to more and more people. By the end of this year, there will be more than 40,000 hotspots, public Wi-Fi access points available across the US in hotels, fast food restaurants, cafés, airports, even parks. By 2007, that number will surpass 100,000. From McDonald's to Kinko's to Holiday Inn, Wi-Fi is becoming a killer amenity. Once Wi-Fi networks are in place, they can be used for much more than just Internet access. For example, the AirPort Express allows users to stream iTunes throughout their homes wirelessly. Wi-Fi is being used to network printers, cameras, and ultimately home entertainment devices.

Product Placement Effectiveness. Implicit Recall and Brand Image at the Level of Modality

Hendrik Arnold, 2013-02-22 Master's Thesis from the year 2013 in the subject Communications / Public Relations / Advertising / Marketing / Social Media, grade 9.0 out of 10

Maastricht University School of Business and Economics course Strategic Marketing language English abstract

Product placement effectiveness currently receives much attention regarding explicit recall, general attitude, and brand attitude. However, few studies investigate the impact on implicit recall and brand image. This study tries to fill these gaps using modality to distinguish placements. It is hypothesized that audio-only placements perform more effectively than visual-only ones, and that audio-visual placements outperform both of the former in terms of both implicit recall and brand image. Furthermore, two moderating effects are hypothesized: namely, perceived congruence and prior notifications. Anderson and Bower's 1973 HAM theory, as well as KPM, Friestad, Wright 1994/1995, and the concept of reactance (Brehm 1981) are used to predict the respective effects. An online questionnaire is used to collect quantitative data from 257 respondents using sequences from the TV show Modern Family. The findings reveal that changing modality indeed leads to better recall and increasing brand image, which is in line with the respective hypotheses. The evaluation of the moderation effects provides mixed results of significance. Theoretical and managerial implications of the findings are discussed in detail, and finally, limitations and potential avenues for future research are defined.
