Designing an Internet David D. Clark, 2018-10-30 Why the Internet was designed to be the way it is and how it could be different now and in the future How do you design an internet The architecture of the current Internet is the product of basic design decisions made early in its history What would an internet look like if it were designed today from the ground up In this book MIT computer scientist David Clark explains how the Internet is actually put together what requirements it was designed to meet and why different design decisions would create different internets He does not take today s Internet as a given but tries to learn from it and from alternative proposals for what an internet might be in order to draw some general conclusions about network architecture Clark discusses the history of the Internet and how a range of potentially conflicting requirements including longevity security availability economic viability management and meeting the needs of society shaped its character He addresses both the technical aspects of the Internet and its broader social and economic contexts He describes basic design approaches and explains in terms accessible to nonspecialists how networks are designed to carry out their functions An appendix offers a more technical discussion of network functions for readers who want the details He considers a range of alternative proposals for how to design an internet examines in detail the key requirements a successful design must meet and then imagines how to design a future internet from scratch It s not that we should expect anyone to do this but perhaps by conceiving a better future we can push toward it

Future Internet Services and Service Architectures Anand R. Prasad, John F. Buford, K. Vijay Gurbani, 2022-09-01 Future Internet Services and Service

Architectures presents state of the art results in services and service architectures based on designs for the future Internet and related emerging networks. The discussions include technology issues, key services, business models, and security. The work describes important trends and directions. Future Internet Services and Service Architectures is intended to provide readers with a comprehensive reference for the most current developments in the field. It offers broad coverage of important topics with twenty chapters covering both technology and applications, written by international experts. The 20 chapters of Future Internet Services and Service Architectures are organized into the following five sections:

- Future Internet Services**: This section contains four chapters which present recent proposals for a new architecture for the Internet with service delivery in the Future Internet as the key focus.
- Peer to Peer Services**: Using the P2P network overlay as a service platform, five chapters explore the P2P architecture and its use for streaming services, communication services, and service discovery.
- Virtualization**: Virtualization and its benefits for resource management, supporting heterogeneity and isolation, are the basis for five chapters which describe virtualization at the endpoint, in the cloud, and in the network.
- Event Distribution**: Publish/Subscribe mechanisms are important for applications which require time sensitive delivery of notifications. The two chapters in this section present recent developments in publish/subscribe, load balancing, and in sensor networks.
- VANETs**: Vehicular Ad Hoc Networks (VANETs) are a network technology which are designed for vehicle-to-vehicle and vehicle-to-infrastructure connectivity for moving vehicles. The four chapters in this section provide an introduction to VANETs, routing services, and system architecture.

Future Internet Services and Service Architectures is complemented by a separate volume, *Advances in Next Generation Services and Service Architectures*, which covers emerging services and service architectures, IPTV context, awareness, and security.
