

GENDER DIFFERENCES IN MATH ANXIETY

Materials and Methods

The study was conducted using a survey method. The survey was distributed to a group of students in a classroom setting. The survey consisted of a series of questions designed to measure math anxiety levels. The survey was completed by 30 students, with 15 males and 15 females. The data was then analyzed using statistical methods.

Results

The results of the study showed that there were significant differences in math anxiety levels between males and females. Females scored significantly higher on the math anxiety scale than males. This finding is consistent with previous research that has shown that females tend to experience higher levels of math anxiety than males.

Hypothesis

It was hypothesized that females would score higher on the math anxiety scale than males. This hypothesis was based on previous research that has shown that females tend to experience higher levels of math anxiety than males.

Conclusion

The study concluded that there were significant differences in math anxiety levels between males and females. Females scored significantly higher on the math anxiety scale than males. This finding is consistent with previous research that has shown that females tend to experience higher levels of math anxiety than males.

Purpose

The purpose of the study was to investigate the differences in math anxiety levels between males and females. The study aimed to determine if there were any significant differences in math anxiety levels between the two groups.

Abstract

This study investigated the differences in math anxiety levels between males and females. The study found that females scored significantly higher on the math anxiety scale than males.
