Kay Li, 2024-01-03. This project is the first to explore how Bernard Shaw intersects constructively with automata, robots, and artificial intelligence (AI). Shaw was born in the golden age of the automaton. His *Bible on the Life Force and Creative Evolution* (Back to Methuselah) was written when Karel and Josef Čapek coined the word robot. Shaw's life ran in parallel with the rise of AI, and the big names in AI were his contemporaries. Moreover, empirical analyses of Shawian texts and images using AI uncover possibilities for new interpretations, demonstrating how future renditions of his works may make use of these advanced technologies to broaden Shaw's audience, readership, and scholarship. *Strategic Management*

Our collective humanity very much depends on nature for joy for comfort and for sheer survival In his prescient new book *The Physics of Capitalism* Erald Kolasi explores the deep ecological physics of human existence by developing a new theoretical framework for understanding the relationship between economic systems and the wider natural world Nature is full of complex and dynamic systems that are constantly interacting with our societies The collective physical interactions of the natural world guide and forge many fundamental features of human societies and civilizations Humanity does not exist on a magical pedestal above the rest of reality we are just one slice in a grand continuum of physical systems that interact combine and transform over time We too belong to the natural world And it s this critical fact that controls the long term fate of our economies and civilizations Among all the living organisms that have called this blue marble home humans are a very recent species In that short period of time we have managed to become one of the most dominant life forms in the history of the planet creating powerful civilizations with elaborate cultures large populations and extensive trade networks We have been nomads and farmers scientists and lawyers nurses and doctors welders and blacksmiths Our achievements are both astonishing and unprecedented but they also carry great risks Throughout history economic growth has depended heavily on people converting more energy from their natural environments and concentrating the resulting energy flows towards the application of specific tasks The economic and demographic growth of human civilization over the last ten thousand years has profoundly impacted natural ecosystems throughout the planet triggering major instabilities across the biosphere that threaten to reverberate on civilization and to destabilize its long term trajectory Swamped with multiple ecological challenges of historic proportions global civilization now stands at a critical tipping point that deserves closer scrutiny If we are to have any hope of addressing the difficult challenges we face then we must begin by understanding them and appreciating their complexity And then we must act This book offers a comprehensive blueprint for our collective future pointing the way to a new post capitalist order that can provide long term viability and stability for human civilization on a global scale
