Adjective Adverb Interfaces in Romance Martin Hummel, Salvador Valera, 2017-12-21 Within the current discussion on grammatical interfaces the word classes of adjective and adverb are of particular interest because they appear to be separated or joined in manifold ways at the level of word class or syntax with morphology playing a prominent role especially in Romance The volume provides typological and theoretical insights into the common or different usage of adjectives and adverbs in Romance Diachronic change is discussed alongside with synchronic variation and the representation in grammar The discussion turns out to be controversial calling into question traditional assumptions such as the dogma of the invariability and the categorial status of the adverb Shale Reservoirs John Breyer, 2012-08-20 Hardcover plus CD

[The Action Plan for Australian Birds 2020](#) Stephen T. Garnett,G Barry Baker,2021-12-01 The Action Plan for Australian Birds 2020 is the most comprehensive review of the status of Australia s avifauna ever attempted The latest in a series of action plans for Australian birds that have been produced every decade since 1992 it is also the largest The accounts in this plan have been authored by more than 300 of the most knowledgeable bird experts in the country and feature far more detail than any of the earlier plans This volume also includes accounts of over 60 taxa that are no longer considered threatened mainly thanks to sustained conservation action over many decades This extensive book covers key themes that have emerged in the last decade including the

increasing impact of climate change as a threatening process most obviously in Queensland's tropical rainforests where many birds are being pushed up the mountains. However, the effects are also indirect as happened in the catastrophic fires of 2019/20. Many of the newly listed birds are subspecies confined to Kangaroo Island where fire destroyed over half the population. But there are good news stories too, especially on islands where there have been spectacular successes with predator control. Such uplifting results demonstrate that when action plans are followed by action on the ground, threatened species can indeed be recovered and threats alleviated.

The Birds of Africa: Volume VIII Roger Safford, Frank Hawkins, 2020-09-17 Universally recognised as by far the most authoritative work ever published on the subject, *The Birds of Africa* is a superb multi-contributor reference work with encyclopaedic species texts, stunning paintings of all species and numerous subspecies, informative line drawings, detailed range maps and extensive bibliographies. Each volume contains an Introduction that brings the reader up to date with the latest developments in African ornithology, including the evolution and biogeography of African birds. Diagnoses of the families and genera, often with superspecies maps, are followed by the comprehensive species accounts themselves. These include descriptions of range and status, field characters, voice, general habits, food and breeding habits. Full bibliographies, acoustic references and indexes complete this scholarly work of reference. This eighth and final volume covers the Malagasy region, which comprises Madagascar and the various islands and archipelagos of the Indian Ocean, including the Seychelles, the Comoros, Mauritius and Réunion. Every resident and migrant species is covered in full detail, comparable to other volumes in the series, and with a colour map for each species. Vagrants are treated in less detail. All species are illustrated on a beautiful series of 64 colour plates with original artwork from John Gale and Brian Small. This is a major work of reference on the birds of the region and will remain the standard text for many years to come.

From Depositional Systems to Sedimentary Successions on the Norwegian Continental Margin Allard W. Martinius, R. Ravnås, J. A. Howell, R. J. Steel, J. P. Wonham, 2014-10-06 The Norwegian Continental Shelf (NCS) focus of this special publication is a prolific hydrocarbon region and both exploration and production activity remains high to this day with a positive production outlook. A key element today and in the future is to couple technological developments to improving our understanding of specific geological situations. The theme of the publication reflects the immense efforts made by all industry operators and their academic partners on the NCS to understand in detail the structural setting, sedimentology and stratigraphy of the hydrocarbon-bearing units and their source and seal. The papers cover a wide spectrum of depositional environments ranging from alluvial fans to deepwater fans in almost every climate type from arid through humid to glacial and in a variety of tectonic settings. Special attention is given to the integration of both analogue studies and process-based models with the insights gained from extensive subsurface datasets.

Antarctic Krill and Interactions in the East Antarctic Ecosystem So Kawaguchi, Sophie Bestley, Martin Cox, Kerrie M. Swadling, Elanor Bell, 2025-08-19 Antarctic krill *Euphausia superba* is the target of the largest commercial fishery in the Southern Ocean Its abundance varies regionally and exhibits great interannual variability This natural variability combined with climate change effects could have substantial consequent impacts on krill predators and the magnitude of ecologically sustainable fishery catch limits Recent increase in the krill catch is due to technological developments in both harvesting and catch processing methods as well as interest in new products derived from krill e.g dietary supplements and pet food The krill fishery is managed by the Commission for the Conservation of Antarctic Marine Living Resources CCAMLR The krill fishery first commenced in 1970's off East Antarctica but the main fishing ground shifted to the South Atlantic sector from the 1990's Interest to fish off East Antarctica has been expressed by CCAMLR Member nations in recent years and the krill fishery recommenced in Indian Ocean sector of East Antarctic sector in the 2016/17 fishing season Given the increase in recent commercial interest the trigger level total allowed catch in one of the management areas CCAMLR Subarea 48.1 has been reached seven times in the Southwest Atlantic the East Antarctic fishery is likely to expand in coming years CCAMLR employs an ecosystem based management approach This requires a wide range of data and information from across regional ecosystem components In the southwest Atlantic sector krill management is based on large scale krill biomass surveys undertaken in 2000 and 2019 together with various national Antarctic programs conducting annual regional scale monitoring this provides assessments of year to year variation of krill ecosystem parameters for CCAMLR to ensure harvesting is carried out in a sustainable manner Contrary to the relatively data rich

Southwest Atlantic sector current precautionary catch limits for the krill fishery off East Antarctica are solely based on information collected through the two large scale multidisciplinary surveys conducted by Australia in Divisions 58 4 1 in 1996 and 58 4 2 in 2006 This Research Topic gathers up to date scientific analysis on the East Antarctic ecosystem arising from recent marine science voyages such as ENRICH Euphausiids and Nutrient Recycling In Cetacean Hotspots in 2019 and TEMPO Trends in Euphausiids off Mawson Predators and Oceanography in 2021 Our topic provides an opportunity to explore ecosystem wide scientific studies including non exclusively krill biomass ecosystem structure and interactions between krill krill predators oceanography and primary production to inform sustainable krill fishery management in the region
