

LO: To investigate the area of compound shapes

As a group, we tackled this complex compound shape

Liam, Murrin and Jake split the shape into 4 shapes as you can see by the green lines.

Each shape was now much easier to work with!

Shape 1: $6 \times 3 = 18\text{cm}^2$ By Binyameen

Shape 2: $6 \times 2 = 12\text{cm}^2$ By Murrin

Shape 3: $2 \times 2 = 4\text{cm}^2$ By Ross

Shape 4: $6 \times 3 = 18\text{cm}^2$ We knew this

Added together, the area of the whole shape is: 52cm^2

Technical Shop Mathematics Thomas Achatz,John G. Anderson,2005 Completely revised and updated this new edition provides the algebraic geometric and trigonometric concepts essential to solving problems commonly encountered in technical and trade occupations Back cover **Pearson Edexcel GCSE (9-1) Mathematics Foundation Student Book 1** Katherine Pate,Naomi Norman,2020-06-15 The new edition of Pearson Edexcel GCSE 9 1 Mathematics Foundation Student Book 1 develops reasoning fluency and problem solving to boost students confidence and give them the best preparation for GCSE study Purposefully updated based on feedback from thousands of teachers and students as well as academic research and impact studies Bolsters preparation for GCSE with new questions that reflect the latest exams and a format that seamlessly aligns with our GCSE Maths courses Shown to help GCSE students master maths with confidence with a UK specific approach that draws upon global best practices and cutting edge research Tried and tested differentiation with a unique unit structure and improved pacing to support every student s progress Extra skills building support problem solving and meaningful practice to consolidate learning and deepen understanding New additions to boost progression and post GCSE study such as Future skills questions and Working towards A level features **KS3 Maths Higher Level All-in-One Complete Revision and Practice: Prepare for Secondary School (Collins KS3 Revision)** Collins KS3,2020-09-01 Level KS3 Subject Maths Advanced **Children's Mathematics 4-15** Julie Ryan,Julian Williams,2007-04 The phrase errors and misconceptions has recently entered the vocabulary of mathematics teacher education and become prominent in the curriculum for initial teacher education This follows several decades of academic study of children s errors and misconceptions It is curious that the term misconception is finding favour in the teaching profession just as the term is falling foul of the academic community One approach to children s errors is to view them as potential windows into children s mathematics Errors may diagnose significant ways of thinking and stages in learning and so point to important opportunities for new learning Often mis conceptions are acquired through reflection on experience in a limited context for example

multiplication makes bigger is a conception drawn from a context of whole numbers When such a conception is erroneously extended and generalised to numbers less than 1 a misconception is diagnosed and real teaching can begin The authors contest the popular view that errors and misconceptions should be corrected as soon as possible On the contrary such misconceptions may be supported by a child's generalised reasoning from experience and therefore require a focused treatment that respects the child's intelligent behaviour A positive view of misconceptions suggests respectful language like alternative frameworks for children's thinking and concept formation The most important consideration is to provide children with the conditions including time to articulate their reasoning confront alternatives and make a rational decision to change their mind or not This book makes use of recent and extensive original data from the authors' own researches on children's performance errors and misconceptions across the mathematics curriculum including standardised data from a large national sample of 4 to 15 year olds and conversations involving children in argumentation and work with teachers implementing change in their classrooms The cycle of research includes use of written diagnostic test items children's reasoning as captured in group argumentation details of the types of reasoning that help children to change their mind and the development of tools for classroom teaching by practising teachers The discussion of research is anchored in practical learning and teaching contexts in order to directly relate to mathematics teaching practice and teachers' expertise The book progressively develops concepts for teachers to use in organising their understanding and knowledge of children's mathematics concluding with an introduction to theoretical accounts of learning and teaching that can help make practical sense The book bridges the gap between research in the psychology of learning mathematics and the reality of classroom practice The book is ground breaking in that it transforms research on diagnostic errors argumentation and teaching strategies into knowledge for teaching The voices in the research include those of children and teachers in classrooms as well as the academic and research communities
