Permeability heterogeneity in cross-bedded sandstones Christel Alexandra Hartkamp-Bakker, 1993 **Advances in Fluvial Dynamics and Stratigraphy** Paul A. Carling, Martin R. Dawson, 1996-08-06 A final chapter provides a brief view of future perspectives *Terrigenous Clastic Depositional Systems* William E. Galloway, David K. Hobday, 2012-12-06

Nonrenewable energy resources comprising fossil fuels and uranium are not randomly distributed within the Earth's crust. They formed in response to a complex array of geologic controls, notably the genesis of the sedimentary rocks that host most commercial energy resources. It is this genetic relationship between economic resources and environment that forms the basis for this book. Our grouping of petroleum, coal, uranium, and ground water may appear to be incongruous or artificial. But our basic premise is that these ostensibly disparate resources share common genetic attributes and that the sedimentological principles governing their natural distributions and influencing their recovery are fundamentally similar. Our combined careers have focused on these four resources, and our experiences in projects worldwide reveal that certain recurring geologic factors are important in controlling the distribution of commercial accumulations and subsurface fluid flow. These critical factors include the shape and stability of the receiving basin, the major depositional elements and their internal detail, and the modifications during burial that are brought about in these sediments by pressure, circulating fluids, heating, and chemical reaction. Since the first edition of this book in 1983, there has been a quantum leap in the volume of literature devoted to genetic stratigraphy and refinement of sedimentological principles, and a commensurate increase in the application of these concepts to resource exploration and development.

International Symposium, 1996 *Proceedings*, 1994 *Petroleum Geology of Southeast Asia* A. J. Fraser, S. J. Matthews, Richard Welch Murphy, 1997 This topical volume gives rapid access to key aspects of the petroleum geology of SE Asia, including economic background, plate tectonic models, petroleum charging, and reservoir systems, as well as detailed field and reservoir studies. It provides substantial new data and interpretations on the oil and gas exploration of the region.

The Control Theory and Application for Well Pattern Optimization of Heterogeneous Sandstone Reservoirs Dehua Liu, Jing Sun, 2017-03-15 The book is focused primarily on characteristics and determinative methods of reservoir orientation, the concept of vector well pattern, and corresponding realistic techniques of well pattern deployment, well pattern control principles, optimum design of well pattern based on the reservoir direction characteristics, and the schemes of well spacing density regulation at different stages of development. The procedures for improving water flooding efficiency have been provided. This book is suitable for reservoir engineering managers, reservoir engineers, and students of petroleum engineering.
