Remote Sensing Handbook - Three Volume Set Prasad Thenkabail,2018-10-03 A volume in the three volume Remote Sensing Handbook series Remote Sensing of Water Resources Disasters and Urban Studies documents the scientific and methodological advances that have taken place during the last 50 years The other two volumes in the series are Remotely Sensed Data Characterization Classification and Accuracies and Land Reso **Environmental Anthropology Today** Helen Kopnina,Eleanor Shoreman-Ouimet,2011-08-05 Today we face some of the greatest environmental challenges in global history Understanding the damage being done and the varied ethics and efforts contributing to its repair is of vital importance This volume poses the question What can increasing the emphasis on the environment in environmental anthropology along with the science of its problems and the theoretical and methodological tools of anthropological practice do to aid conservation efforts policy initiatives and our overall understanding of how to survive as citizens of the planet Environmental Anthropology Today combines a range of new ethnographic work with chapters exploring key theoretical and methodological issues and draws on disciplines such as sociology and environmental science as well as anthropology to illuminate those issues The case studies include work on North America Europe India Africa Asia and South America offering the reader a stimulating and thoughtful survey of the work currently being conducted in the field *The Social Scientist as Public Intellectual* Charles F. Gattone,2006-03-14 What is the role of the social scientist in public affairs How have changes in the structure of the university system and the culture of academia reshaped the opportunities and constraints facing contemporary scholars The Social Scientist as Public Intellectual addresses these and other questions by reviewing the ideas of seminal thinkers in Europe and the United States and relating their conclusions to today s world In this book Charles Gattone examines the analyses of Max Weber Thorstein Veblen Karl Mannheim Joseph Schumpeter C Wright Mills John Kenneth Galbraith and Pierre Bourdieu tracing their perspectives through two World wars the Cold War and into the present Gattone situates the ideas of these authors in historical context showing the ways the realities of their time fascism totalitarianism the rise of bureaucratic institutions and the expansion of industrial democracy informed their assessments regarding the place of the intellectual in the political realm He brings their work into the current context addressing the difficulties involved in bridging the gap between the ideas of scholarly inquiry and the practical realities of politics and examining the ways newer factors such as the mass media relate to the character and trajectories of popular sentiment Gattone argues that although political and economic institutions continue to influence the course of academic knowledge opportunities remain for social scientists to act independently and develop insight that can ultimately be of value to a wide spectrum of the population in the modern order Rather than follow the habit of striving to satisfy the narrow demands of

institutional supporters Gattone suggests that social scientists have the potential to approach their work from the standpoint of a broader orientation and address social issues as public intellectuals

Expanding Access to Research Data National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Data Access for Research Purposes, 2005-11-11 Policy makers need information about the nation ranging from trends in the overall economy down to

the use by individuals of Medicare in order to evaluate existing programs and to develop new ones This information often comes from research based on data about individual people households and businesses and other organizations collected by statistical agencies The benefit of increasing data accessibility to researchers and analysts is better informed public policy To realize this benefit a variety of modes for data access including restricted access to confidential data and unrestricted access to appropriately altered public use data must be used The risk of expanded access to potentially sensitive data is the increased probability of breaching the confidentiality of the data and in turn eroding public confidence in the data collection enterprise Indeed the statistical system of the United States ultimately depends on the willingness of the public to provide the information on which research data are based Expanding Access to Research Data issues guidance on how to more fully exploit these tradeoffs The panel s recommendations focus on needs highlighted by legal social and technological changes that have occurred during the last decade

Land Change Science, Political Ecology, and Sustainability Christian Brannstrom, Jacqueline M. Vadjunec, 2014-01-23 Recent claims regarding convergence and divergence between land change science and political ecology as approaches to the study of human environment relationships and sustainability science are examined and analyzed in this innovative volume Comprised of 11 commissioned chapters as well as introductory and concluding synthesis chapters it advances the two fields by proposing new conceptual and methodological approaches toward integrating land change science and political ecology The book also identifies areas of fundamental difference and disagreement between fields These theoretical contributions will help a generation of young researchers refine their research approaches and will advance a debate among established scholars in

geography land use studies and sustainability science that has been developing since the early 2000s At an empirical level case studies focusing on sustainable development are included from Africa Central and South America and Southeast Asia The specific topics addressed include tropical deforestation swidden agriculture mangrove forests gender and household issues

Building on Progress German Data Forum,2011-02-09 This publication provides a comprehensive compendium of the current state of Germany's research infrastructure in the social economic and behavioural sciences In addition the book presents detailed discussions of the current needs of empirical researchers in these fields as well as of opportunities for future development The importance of solid data for both public policy and the social and economic sciences is obvious Today empirical research is essential in finding solutions to many of the major challenges our society faces such as environmental change turbulent financial markets and population growth Based on 68 advisory reports by more than 100 internationally recognised authors from a wide range of fields the book provides recommendations by the German Data Forum RatSWD on how to improve the research infrastructure so as to create conditions ideal for making Germany's social economic and behavioural sciences more innovative and internationally competitive

Photography in India Aileen Blaney,Chinar Shar,2020-09-23 Photography's prominence in the representation and experience of India in contemporary and historical times has not guaranteed it a position of sustained attention in research and scholarship For a technology as all pervasive as photography and a country as colossal as India this scenario is somewhat of an anomaly Photography in India explores elements of the past present and future of photography in the context of India through speculation and reflection on photography as an artistic documentary and everyday practice The perspectives of writers theorists curators and artists are selectively brought to bear upon known as well as previously unseen photographic archives together with changes in photographic practice that have been synchronous with contemporary India's rapid urban and rural transformation and the technological shift from chemistry and light to programming and algorithms Essential reading for anyone interested in Indian photography this book binds insights into a history of photography with its contemporary development consolidating wide ranging thinking on the topic and setting the agenda for future research

Earth Observations from Space National Research Council,Division on Earth and Life Studies,Board on Atmospheric Sciences and Climate,Committee on Scientific Accomplishments of Earth Observations from Space,2008-01-17 Over the past 50 years thousands of satellites have been sent into space on missions to collect data about the Earth Today the ability to forecast weather climate and natural hazards depends critically on these satellite based observations At the request of the National Aeronautics and Space Administration the National Research Council convened a committee to examine the scientific accomplishments that have resulted from space based observations This book describes how the ability to view the entire globe at once uniquely available from satellite observations has revolutionized Earth studies and ushered in a new era of multidisciplinary Earth sciences In particular the ability to gather satellite images frequently enough to create movies of the changing planet is improving the

understanding of Earth's dynamic processes and helping society to manage limited resources and environmental challenges. The book concludes that continued Earth observations from space will be required to address scientific and societal challenges of the future.

Geography in America at the Dawn of the 21st Century Gary L. Gaile, Cort J. Willmott, 2005

Geography in America at the Dawn of the 21st Century surveys American geographers' current research in their specialty areas and tracks trends and innovations in the many subfields of geography. As such, it is both a state-of-the-discipline assessment and a topical reference. It includes an introduction by the editors and 47 chapters, each on a specific specialty. The authors of each chapter were chosen by their specialty group of the American Association of Geographers (AAG). Based on a process of review and revision, the chapters in this volume have become truly representative of the recent scholarship of American geographers. While it focuses on work since 1990, it additionally includes related prior work and work by non-American geographers. The initial *Geography in America* was published in 1989 and has become a benchmark reference of American geographical research during the 1980s. This latest volume is completely new and features a preface written by the eminent geographer Gilbert White.

Tourism and Earthquakes C. Michael Hall, Girish Prayag, 2020-10-08

This book offers a comprehensive overview of the relationship between tourism and earthquakes through all stages of a disaster. It discusses the measures available to manage tourism after earthquakes and examines the means to mitigate the potential impacts of earthquakes on tourism. The chapters address important questions such as: are tourists who come to earthquake regions immediately after an earthquake a benefit or a burden for recovery and should priority be given to evacuate tourists after an earthquake hits? The volume provides insights into the ethical, commercial, and socioeconomic issues facing tourism after a major earthquake. It will be useful to students and researchers in tourism studies, tourism planning, and marketing, natural hazards, and destination and disaster management.

Down to Earth National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Mapping Science Committee, Committee on Geography, Committee on the Geographic Foundation for Agenda 21, 2002-11-24

In 1992, world leaders adopted Agenda 21, the work program of the 1992 UN Conference on Environment and Development. This landmark event provided a political foundation and action items to facilitate the global transition toward sustainable development. The international community marked the tenth anniversary of this conference in Johannesburg, South Africa, in August 2002. *Down to Earth*, a component of the U.S. State Department's Geographic Information for Sustainable Development project for the World Summit, focuses on sub-Saharan Africa, with examples drawn from case study regions where the U.S. Agency for International Development and other agencies have broad experience. Although African countries are the geographic focus of the study, the report has broader applicability. *Down to Earth* summarizes the importance and applicability of geographic data for sustainable development and draws on experiences in African countries to examine how future sources and applications of geographic data could provide reliable support to decision makers as they work towards sustainable development. The committee emphasizes the potential of new

technologies such as satellite remote sensing systems and geographic information systems that have revolutionized data collection and analysis over the last decade

Treatise on Geomorphology, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned
