

The ailerons are the primary means of rolling the aircraft. They are located on the trailing edge of the wing, one on each side. When the ailerons are moved, they change the lift on each side of the wing, causing the aircraft to roll. For example, if the left aileron is moved down and the right aileron is moved up, the lift on the left side increases and the lift on the right side decreases, causing the aircraft to roll to the left.
