Content Distribution for Mobile Internet: A Cloud-based Approach Zhenhua Li, Yafei Dai, Guihai Chen, Yunhao Liu, 2023-02-14 Content distribution i.e. distributing digital content from one node to another node or multiple nodes is the most fundamental function of the Internet. Since Amazon's launch of EC2 in 2006 and Apple's release of the iPhone in 2007, Internet content distribution has shown a strong trend toward polarization. On the one hand, considerable investments have been made in creating heavyweight integrated data centers heavy cloud all over the world in order to achieve economies of scale and high flexibility efficiency of content distribution. On the other hand, end user devices light end have become increasingly lightweight mobile and heterogeneous creating new demands concerning traffic usage energy consumption bandwidth latency reliability and or the security of content distribution. Based on comprehensive real world measurements at scale we observe that existing content distribution techniques often perform poorly under the abovementioned new circumstances. Motivated by the trend of heavy cloud vs light end this book is dedicated to uncovering the root causes of today's mobile networking problems and designing innovative cloud based solutions to practically address such problems. Our work has produced not only academic papers published in prestigious conference proceedings like SIGCOMM NSDI MobiCom and MobiSys but also concrete effects on industrial systems such as Xiaomi Mobile MIUI OS Tencent App Store Baidu PhoneGuard and WiFi com. A series of practical takeaways and easy to follow testimonials are provided to researchers and practitioners working in mobile networking and cloud computing. In addition we have released as much code and data used in our research as possible to benefit the community.

The Internet Trap Matthew Hindman, 2018-09-25 A book that challenges everything you thought you knew about the online economy The internet was supposed to fragment audiences and make media monopolies impossible Instead behemoths like Google and Facebook now dominate the time we spend online and grab all the profits from the attention economy The Internet Trap explains how this happened This provocative and timely book sheds light on the stunning rise of the digital giants and the online struggles of nearly everyone else and reveals what small players can do to survive in a game that is rigged against them Matthew Hindman shows how seemingly tiny advantages in attracting users can snowball over time The internet has not reduced the cost of reaching audiences it has merely shifted who pays and how Challenging some of the most enduring myths of digital life Hindman explains why the internet is not the postindustrial technology that has been sold to the public how it has become mathematically impossible for grad students in a garage to beat Google and why net neutrality alone is no guarantee of an open internet He also explains why the challenges for local digital news outlets and other small players are worse than they appear and demonstrates what it really takes to grow a digital audience and stay

alive in today's online economy The Internet Trap shows why even on the internet there is still no such thing as a free audience
