Monsoon Evolution and Tectonics Peter D. Clift, Ryūji Tada, Hongbo Zheng, 2010 The Earth s climate varies through geological time as a result of external orbital processes as well as the positions of continents growth of mountains and the opening and closure of oceanic gateways Climate modelling suggests that the intensity of the Asian monsoon should correlate at least in part with the uplift history of the Tibetan Plateau and the Himalaya as well as the evolution of gateways and the retreat of shallow seas in Central Asia Long term reconstructions of both mountain building and monsoon activity are key to testing the proposed links This collection of papers presents a series of new studies documenting the variations of the Asian monsoon on orbital and tectonic timescales together with the impact this has had on environmental conditions The issue of which proxies are best suited to measuring monsoons is addressed as is the effect that the monsoon has had on erosion and
