Mind-Reading and Artificial Intelligence: Past, Present and Future Prof. (Dr.) Jai Paul Dudeja, 2024-10-30 Mind reading typically refers to the ability of discerning or interpreting someone else's thoughts, feelings, or intentions. Mind Reading has two components: human-based and ii device-based artificial intelligence. Artificial Intelligence (AI) refers to programming computers to do tasks that normally require human intelligence, like learning, problem-solving, and understanding language. It is like giving computers the ability to think and make decisions on their own, similar to how humans do. AI helps machines learn from data, adapt to new situations, and perform tasks without being explicitly programmed for each step. This book covers the topics on human-based and device-based mind reading and interpretation of artificial intelligence, which is divided into 32 chapters and the following 8 sections: i Mind Reading and Artificial Intelligence Introduction and Overview, ii Human-Based Mind Reading, iii Artificial Intelligence Introduction, Types of Learning, iv Device-Based Mind Reading And Virtual Assistants, v Applications and Opportunities of Artificial Intelligence, vi Artificial Intelligence Ethical Issues, Risks, and Regulations, vii Artificial Consciousness, and viii Artificial Intelligence in India: Status and the Way Forward.

Hands-On AI Trading with Python, QuantConnect and AWS Jiri Pik, Ernest P. Chan, Jared Broad, Philip Sun, Vivek Singh, 2025-01-29 Master the art of AI-driven algorithmic trading strategies through hands-on examples in depth insights and step-by-step guidance. Hands On AI Trading with Python, QuantConnect and AWS explores real-world applications of AI technologies in algorithmic trading. It provides practical examples with complete code, allowing readers to understand and expand their AI toolbelt. Unlike other books, this one focuses on designing actual trading strategies rather than setting up backtesting infrastructure. It utilizes QuantConnect, providing access to key market data from Algoseek and others. Examples are available on the book's GitHub repository, written in Python and include performance tearsheets or research Jupyter notebooks. The book starts with an overview of financial trading and QuantConnect's platform, organized by AI technology used. Examples include constructing portfolios with regression models predicting dividend yields and safeguarding against market volatility using machine learning packages like SKLearn and MLFinLab. Use principal component analysis to reduce model features, identify pairs for trading, and run statistical arbitrage with packages like LightGBM. Predict market volatility regimes and allocate funds accordingly. Predict daily returns of tech stocks using classifiers. Forecast Forex pairs' future prices using Support Vector Machines and wavelets. Predict trading day momentum or reversion risk using TensorFlow and temporal CNNs. Apply large language models (LLMs) for stock research analysis, including prompt engineering and building RAG applications. Perform sentiment analysis on real-time news feeds and train time series forecasting models for portfolio optimization. Better Hedging by Reinforcement Learning and AI. Implement reinforcement learning models for hedging options and derivatives with PyTorch AI for Risk Management and Optimization. Use corrective AI and conditional portfolio optimization techniques for risk management and capital allocation. Written by domain experts.
