Four Battlegrounds Paul Scharre, 2023-02-28 An NPR 2023 Books We Love Pick. One of the Next Big Idea Club's Must Read Books. An invaluable primer to arguably the most important driver of change for our future. P. W. Singer, author of *Burn In*. An award winning defense expert tells the story of today's great power rivalry, the struggle to control artificial intelligence. A new industrial revolution has begun. Like mechanization or electricity before it, artificial intelligence will touch every aspect of our lives and cause profound disruptions in the balance of global power, especially among the AI superpowers: China, the United States and Europe. Autonomous weapons expert Paul Scharre takes readers inside the fierce competition to develop and implement this game changing technology and dominate the future. *Four Battlegrounds* argues that four key elements define this struggle: data, computing power, talent and institutions. Data is a vital resource like coal or oil, but it must be collected and refined. Advanced computer chips are the essence of computing power; control over chip supply chains grants leverage over rivals. Talent is about people, which country attracts the best researchers and most advanced technology companies. The fourth battlefield is, maybe, the most critical: the ultimate global leader in AI will have institutions that effectively incorporate AI into their economy, society and especially their military. Scharre's account surges with futuristic technology. He explores the ways AI systems are already discovering new strategies via millions of war game simulations.

Political systems across much of the West are now subject to populist disruption which often takes an anti Constitutional form This interdisciplinary book argues that the current analysis of anti Constitutional populism while often astute is focused far too narrowly It is held here that due to an obscured complex of dynamics that has shaped the history of the West since its inception and which remains active today we do not understand the present This complex not only explains the current disruptions across the fields of contemporary religion politics economics and emerging artificial intelligence but also how these disruptions derive each from originary sources This work thereby explains not only the manner in which this complex has functioned across historical time but also why it is that its inherent unresolvable flaws have triggered the shifts between these key fields as well as the intractability of these present disruptions It is this flawed complex of factors that has led to current conflicts about abortion reform political populism the failure of neoliberalism and the imminent quantum shift in generative artificial intelligence It is argued that in this law is heavily implicated especially at the constitutional level
