Algorithms for the People Josh Simons,2025-07-08 How to put democracy at the heart of AI governance Artificial intelligence and machine learning are reshaping our world Police forces use them to decide where to send police officers judges to decide whom to release on bail welfare agencies to decide which children are at risk of abuse and Facebook and Google to rank content and distribute ads In these spheres and many others powerful prediction tools are changing how decisions are made narrowing opportunities for the exercise of judgment empathy and creativity In Algorithms for the People Josh Simons flips the narrative about how we govern these technologies Instead of examining the impact of technology on democracy he explores how to put democracy at the heart of AI governance Drawing on his experience as a research fellow

at Harvard University a visiting research scientist on Facebook's Responsible AI team and a policy advisor to the UK's Labour Party Simons gets under the hood of predictive technologies offering an accessible account of how they work why they matter and how to regulate the institutions that build and use them He argues that prediction is political human choices about how to design and use predictive tools shape their effects Approaching predictive technologies through the lens of political theory casts new light on how democracies should govern political choices made outside the sphere of representative politics Showing the connection between technology regulation and democratic reform Simons argues that we must go beyond conventional theorizing of AI ethics to wrestle with fundamental moral and political questions about how the governance of technology can support the flourishing of democracy

Secure Edge Computing Mohiuddin Ahmed, Paul Haskell-Dowland, 2021-08-12 The internet is making our daily life as digital as possible and this new era is called the Internet of Everything IoE Edge computing is an emerging data analytics concept that addresses the challenges associated with IoE More specifically edge computing facilitates data analysis at the edge of the network instead of interacting with cloud based servers Therefore more and more devices need to be added in remote locations without any substantial monitoring strategy This increased connectivity and the devices used for edge computing will create more room for cyber criminals to exploit the system's vulnerabilities Ensuring cyber security at the edge should not be an afterthought or a huge challenge The devices used for edge computing are not designed with traditional IT hardware protocols There are diverse use cases in the context of edge computing and Internet of Things IoT in remote locations However the cyber security configuration and software updates are often overlooked when they are most needed to fight cyber crime and ensure data privacy Therefore the threat landscape in the context of edge computing becomes wider and far more challenging There is a clear need for collaborative work throughout the entire value chain of the network In this context this book addresses the cyber security challenges associated with edge computing which provides a bigger picture of the concepts techniques applications and open research directions in this area In addition the book serves as a single source of reference for acquiring the knowledge on the technology process and people involved in next generation computing and security It will be a valuable aid for researchers higher level students and professionals working in the area
