TRANSFORMING INDUSTRIES WITH AI: EXPLORING THE UPSIDES AND DOWNSIDES OF EMERGING TECHNOLOGY Bechoo Lal, Mr. Ajay Jaiswal, Mohit Tiwari, Dr. Haewon Byeon, 2023-08-21

In the current day and age of technology, buzzwords such as artificial intelligence (AI), the Internet of Things (IoT), and cloud computing are often used. AI is the technology that tries to make computers or other machines equal to the human brain, making them capable of learning and problem solving in the same way that humans do. Applications based on AI may be readily connected with other developing technologies such as the Internet of Things (IoT), the cloud, Big Data, and Blockchain.

The Internet of Things refers to a network of interconnected internet-enabled items or things that are able to gather and share data with one another. In recognition of the idea of the Internet of Things, a significant number of tangible items are now being connected with the internet at an exceptionally rapid pace. By the year 2025, there will be more than 30 billion Internet of Things connections with approximately four Internet of Things devices per person on average, according to reports and current trends.

Cloud computing provides a means through which the huge amounts of data created by these Internet of Things applications may be sent to their respective endpoints. The use of cloud computing is widely acknowledged to be a facility for the processing and storage of data. Just in time processing and lightning fast response times are necessities for any and all real-time applications that make use of the Internet of Things.

Researchers, academics, and industrialists in the fields of health care, agriculture, telecommunications, online and mobile commerce, and transportation have shown a significant amount of interest in AI and IoT-based data. In today's world, AI-based methodologies increase the role that IoT plays in business, monitoring health care, monitoring illness, prediction, bioinformatics research and development, stock market prediction, social network analysis, weather analysis, agriculture, transportation, and resource optimization.

The implementation of these applications needs a certain amount of processing capability as well as data storage, both of which are often given by cloud-based services. The data that has been saved is processed in a high precision and just in time way with the help of AI algorithms. The cloud is a strong instrument

that can send data not only via the standard channels of the internet but also through a dedicated direct connection The Internet of Things becomes the source of creating enormous amounts of data and the cloud becomes an essential component for data storage As a result the Internet of Things and clouds have become deeply intertwined in order to provide commercial business services 1 Page This configuration is sometimes referred to as cloud based IoT As a result of their success in providing cloud based Internet of Things IoT services companies like Amazon Web Services AWS Google and Microsoft have become industry leaders This makes the task much more rewarding In addition the cloud based Internet of items is utilized to link a broad variety of intelligent items for usage in different applications Artificial intelligence AI the internet of things IoT and cloud computing all play significant roles in a variety of domains in the present and will continue to do so in the future The goal of AI is to analyze and collect the data produced through cloud based Internet of Things devices by gathering data from a variety of businesses Integrating AI IoT and the cloud has resulted in a transformation of both the entire storage capacity and the digital world and as a result it has become a subject of intense interest among academics and academicians The purpose of this chapter is to place an emphasis on the function that AI plays in data storage that is based on the cloud and IoT The remaining parts of the chapter are broken down into the following sections storing of data on the cloud is the primary emphasis examines the function that IoT plays in cloud environments In addition the part that AI plays in the Internet of Things IoT and cloud data storage is discussed in Section 6 brings the chapter to a close by discussing the applications of AI IoT and clouds in a variety of industries
