Students are not required to have advanced mathematics knowledge such as matrix algebra or calculus. The author introduces machine learning algorithms utilizing the widely used R language for statistical analysis. Each chapter includes examples, case studies, and interactive tutorials to enhance understanding. No prior programming knowledge is needed. The book leverages the `tidymodels` package, an extension of R, to streamline data processing and model workflows. This package simplifies commands, making the logic of algorithms more accessible by minimizing programming syntax hurdles. The use of `tidymodels` ensures a unified experience across various machine learning models. With interactive tutorials that students can download and follow along at their own pace, the book provides a practical approach to apply machine learning algorithms to real-world scenarios. In addition to the interactive tutorials, each chapter includes a Digital Resources section offering links to articles, videos, data, and sample R code scripts. A companion website further enriches the learning and teaching experience: <https://ai.lange-analytics.com>. Applied Data Science in Tourism Roman Egger, 2022-01-31

Access to large data sets has led to a paradigm shift in the tourism research landscape. Big data is enabling a new form of knowledge gain while, at the same time, shaking the epistemological foundations and requiring new methods and analysis approaches. It allows for interdisciplinary cooperation between computer sciences and social and economic sciences and complements the traditional research approaches. This book provides a broad basis for the practical application of data science approaches such as machine learning, text mining, social network analysis, and many more, which are essential for interdisciplinary tourism research. Each method is presented in principle, viewed analytically, and its advantages and disadvantages are weighed up, and typical fields of application are presented. The correct methodical application is presented with a how-to approach together with code examples, allowing a wider reader base, including researchers, practitioners, and students entering the field. The book is a very well-structured introduction to data science, not only in tourism and its methodological foundations, accompanied by well-chosen practical cases. It underlines an important insight: data are only representations of reality; you need methodological skills and domain background to derive knowledge from them.

Hannes Werthner, Vienna University of Technology

Roman Egger has accomplished a difficult but necessary task: make clear how data science can practically support and foster travel and tourism research and applications. The book offers a well-taught collection of

chapters giving a comprehensive and deep account of AI and data science for tourism Francesco Ricci Free University of Bozen Bolzano This well structured and easy to read book provides a comprehensive overview of data science in tourism It contributes largely to the methodological repository beyond traditional methods Rob Law University of Macau
