Sam Altman MANAS PAL, 2025-10-29

Sam Altman Architect of the AI Age is the definitive biography of one of the most influential figures in modern technology the man behind OpenAI and ChatGPT From his early days as a curious Midwestern child teaching himself to code to his rise as a Silicon Valley founder with Loopt and later as president of Y Combinator guiding hundreds of startups Altman's journey reflects the restless drive of innovation in its purest form But his most consequential chapter began with the founding of OpenAI a bold mission to ensure that artificial intelligence would serve humanity not threaten it This book traces the story of how OpenAI went from a non profit research lab to the creator of ChatGPT a tool that shocked the world by showing just how close we may be to artificial general intelligence Along the way it explores the controversial decision to adopt a capped profit structure the multibillion dollar partnership with Microsoft and the debates over safety ethics and regulation that Altman has been forced to navigate on the global stage Across more than 30 000 words of research and storytelling you'll discover Altman's childhood education and first ventures in tech Lessons from Loopt and his years shaping the next generation of startups at Y Combinator The founding vision values and controversies of OpenAI How GPT models

evolved from obscure research projects into cultural phenomena The release of ChatGPT and the shockwaves it sent through business education and society Altman s views on AGI existential risk and the urgent need for regulation Criticisms and controversies that have tested his leadership The open ended possibilities of a future shaped by artificial intelligence from utopia to dystopia This is not only a biography of Sam Altman but a chronicle of our time the birth of an intelligence beyond human design and the extraordinary risks and opportunities it presents For anyone curious about where technology is heading and the people steering it this book offers both a portrait of a visionary and a reflection on the choices that will define the century The future of AI is being written now This is the story of the man holding the pen The Death of Truth Steven Brill,2024-06-04 How did we become a world where facts shared truths have lost their power to hold us together as a community as a country globally How have we allowed the proliferation of alternative facts hoaxes even conspiracy theories to destroy our trust in institutions leaders and legitimate experts Best selling journalist Steven Brill documents the forces and people from Silicon Valley to Madison Avenue to Moscow to Washington that have created and exploited this world of chaos and division and offers practical solutions for what we can do about it A precise description of the punishment cell we have built around our minds and the first few steps back towards light and air Timothy Snyder Author of On Tyranny and Professor of History Yale University A seminal ground breaking documented and honest examination of two of the central dilemmas of our time what is truth and where to find it Bob Woodward associate editor at The Washington Post As the cofounder of NewsGuard a company that tracks online misinformation Steven Brill has observed the rise of fake news from a front row seat In The Death of Truth with startling often terrifying clarity he explains how we got here and how we can get back to a world where truth matters None of this conspiracy theories embraced expertise ridiculed empirical evidence ignored has happened by accident Brill takes us inside the decisions made by executives in Silicon Valley to code the algorithms embedded in their social media platforms to maximize profits by pushing divisive content He unravels the ingenious creation of automated advertising buying systems that reward that click baiting content and penalize reliable news publishers and describes how the use of these ad financed misinformation platforms by politicians hucksters and conspiracy theorists deceives ordinary citizens He documents how the most powerful adversaries of America have used American made social media and advertising tools against us with massive disinformation campaigns and how with the development of generative artificial intelligence everything could get exponentially worse unless we act The stakes are high for all of us including Brill himself whose company s role in exposing Russian disinformation operations resulted in a Russian agent targeting him and his family Crucially Brill lays out a series of provocative but realistic prescriptions for what we can do now to reverse course proposals certain to stir debate and even action that could curb the power of big tech to profit from division and chaos tamp down polarization and restore the trust necessary to bring us together **Regulating Hate Speech Created by Generative AI** Jay Liebowitz,2024-08-02 Regulating Hate Speech Created by Generative AI explores the new hybrid space of

Human Machine Interaction HMI in which hate speech is represented and computed through algorithms and AI generative systems The book is exploratory because there are still many problem solving challenges to be faced It is also innovative because it is not assuming that solutions lie only in technological advancements but on a broader scale In this sense large language models can and are being considered from a holistic view i e from the different dimensions and layers of regulatory and legal governance Highlights of the book include Generative AI and social engines of hate An introduction to generative Artificial Intelligence application trends and ethics The mechanics and validation of generative AI outcomes An evaluation of Generative AI for hate speech detection Best practices and key considerations for AI regulation Using GenAI capabilities for early detection of threats in the digital environment This book is a hard look at ways to regulate generative AI to reduce online hate and secure justice in a digital environment Featuring research and offering practical guidelines the book examines guidelines for regulating generative AI models so they do not contribute to online hate disinformation and imagery

Rethinking Informed Consent in the Big Data Age Adam J. Andreotta, 2024-12-23 In the big data age providing informed consent online has never been more challenging Countless companies collect and share our personal data through devices apps and websites fuelling a growing data economy and the emergence of surveillance capitalism Few of us have the time to read the associated privacy policies and terms and conditions and thus are often unaware of how our personal data are being used This is a problem as in the last few years large tech companies have abused our personal data As privacy self management through the mechanism of providing online consent has become increasingly difficult some have argued that surveillance capitalism and the data economy more broadly need to be overthrown This book presents a different perspective It departs from the concept of revolutionary change to focus on pragmatic incremental solutions tailored to everyday contexts It scrutinises how consent is currently sought and provided online and offers suggestions about how online consent practices can be improved upon These include the possibility of subjecting consent gathering practices to ethics committees for review the creation of visual based consent agreements and privacy policies to help with transparency and engagement the development of software to protect privacy and the idea of automated consent functionalities that allow users to bypass the task of reading vast amounts of online consent agreements The author suggests that these small scale changes to online consent obtaining procedures could if successfully implemented provide us with a way of self managing our privacy in a way that avoids a revolutionary dismantling of the data economy In the process readers are encouraged to rethink the very purpose of providing informed consent online *Rethinking Informed Consent in the Big Data Age* will appeal to researchers in normative ethics applied ethics philosophy of law and the philosophy of AI It will also be of interest to business scholars communication researchers students and those in industry

MOVE Tim Lewko, 2025-11-21 Developed by Tim Lewko a 25 year strategy veteran MOVE shows leaders how to embed artificial intelligence AI directly into the strategy process and validate strategic bets pressure test assumptions and adapt faster than the competition all while maintaining control over

final decisions Traditional strategy frameworks cannot keep up with trade wars supply chain disruptions and shifting consumer behaviour and leaders can no longer afford to wait for annual planning cycles or lengthy strategy retreats MOVE responds to this rapid change by simplifying strategy into a clear repeatable system of seven essential tools all powered by AI to accelerate decision making and execution It s a practical leadership owned operating system that aligns strategic assumptions project prioritization and quarterly execution cycles Through examples this book reveals how AI can power real time data analysis surface critical indicators that signal when a strategic bet is veering off course and show when emerging threats require immediate attention In a rapidly changing world MOVE is a key tool for senior executives business leaders board members CEOs Presidents and P L owners to regain control across the entire execution cycle

International Business Law Edward J. Swan, 2025-03-18 International Business Law In the New Cyberworld Edward J Swan Conducting successful international business in the modern electronically communicating world requires a wide range of tools of international cooperation in order to ensure reasonable and effective laws and regulations governing the cyber business world as well as to avoid and if necessary resolve conflicts and miscommunications that inevitably arise This is the first book to provide a comprehensive overview of legal measures to regulate cyber commerce around the globe with detailed coverage of the world s major markets and a legal and regulatory review both national and international of digital penetration of the world s major business sectors In a thoroughly researched survey of currently applicable e commerce law across the globe the author describes and analyzes such aspects as the following international laws and conventions affecting cyber business law of international contracts privacy and data protection issues including cybercrime cyberwar bribery and corruption and intellectual property and competition There are individual chapters for major jurisdictions including the European Union the United States the United Kingdom France China India Japan South Korea Singapore the United Arab Emirates and Saudi Arabia Businesses and their in house counsel as well as lawyers advising or adjudicating business related legal issues will greatly appreciate the book s in depth description and analysis of how enforceable business agreements are formed how they can be enforced and how many legal jurisdictions one s business is reaching and how the legal requirements of each jurisdiction will affect one s agreements and one s business expectations

Artificial Intelligence Law Edward Swan, 2024-03-18 It is inevitable given the enormous media driven concern generated by the recent application of artificial intelligence AI to an ever expanding spectrum of day to day human experience that the need for a clearly articulated legal response has become imperative This book both clarifies the controversial issues surrounding the use of AI and explores in great detail how far from being unregulated the creation distribution and operation of AI systems currently is and will remain subject to a vast array of existing laws and regulations all over the world Demonstrating beyond any doubt that the traditional concepts of legal responsibility including duty of care negligence and compensation for damages will always be applicable to those humans who create and or use artificially intelligent things or systems the author shows how AI systems

are clearly implicated in numerous existing legal regimes including the following relevant provisions under international law and EU law applicable provisions in the laws of the United States the United Kingdom France China India Japan South Korea and Singapore and numerous national provisions in the legal fields of health and safety intellectual property competition privacy and data protection and military engagement However given the lack of international consensus on this vitally important issue the author suggests that any worldwide agreement on the legal responsibilities relating to the use of AI will need to be carefully defined and that provisions will need to be reviewed to determine how they will apply to any new range of artificially intelligent creations The purpose of this book is to review those legal concepts throughout the world that currently govern the application of AI and to comment on modifications or extensions of the rule of law that are being proposed as necessary to serve and protect humanity in relation to the expanding applications of AI It is important that anyone who uses or is affected by AI products understands the relationship between existing laws and regulations in major markets around the world and those areas where initial regulations may be required For them for their counsel and for the various policy and regulatory authorities confronted with AI issues this book will prove an essential guide

Generative AI and Education B. Mairéad Pratschke, 2024-08-27 This volume addresses the gap in knowledge around generative AI and its applications in education It draws on the recent history of technological innovation and digital pedagogies locating generative AI in the contemporary discourse around education futures It argues that a new hybrid model of education is emerging requiring educational institutions to embed generative AI into course and programme design delivery and assessment It also proposes a shift from a focus on learning as output to learning as a process and explores what that shift might look like Grounded in educational theory it offers actionable pedagogy informed guidance on how to position AI as a collaborator in the construction of learning in a manner that is congruent with the values and aims of education It offers advice based on evidence based digital pedagogy including frameworks for effective teaching and learning with generative AI that enable educators and designers to put these ideas into practice The book also explores the wider context informing this shift connecting narratives from

governments and industry leaders on the strategic importance of generative AI and lifelong learning learning agility and future skills that make the case for the integration of competency based assessment into mainstream education Finally going beyond pedagogy and practice it considers of some of the broader issues including limitations and ethics and the implications of integrating generative AI into institutional planning and design and includes a sample roadmap for education leaders to start the process of integrating generative AI into their institutions This work approaches the topic of generative AI from the vantage point of educators by addressing themes and concerns that will resonate with professionals in the sector

Novel Ecologies Allison Carruth, 2025-03-04 Tracing the convergence of ecology and engineering over the last three decades this book pinpoints a new environmental paradigm that the author calls Nature Remade Allison Carruth's Novel Ecologies shows how the tech industry has taken up the wilderness mythologies that shaped one strain of American environmentalism over the last century Calling this twenty first century environmental imagination Nature Remade Carruth describes a distinctly West Coast framework that is at once nostalgic and futuristic Through three case studies synthetic wildlife the digital cloud and space colonization the book shows Nature Remade to be a quasi religious belief in venture capitalism and big tech This paradigm thus imagines a future in which species ecosystems and entire planets are re generated and re created through engineering Novel Ecologies challenges the conviction that climate change and other environmental crises must be met with ever larger scale forms of technological intervention Against the new worlds conjured by Google Meta Open AI Amazon SpaceX and a host of lesser known start ups Carruth marshals writers and artists who imagine provisionally hopeful environmental futures while refusing to forget the histories that have made the world what it is On this track of the book Carruth discusses the works of Octavia Butler Becky Chambers Jennifer Egan Ruth Ozeki Craig Santos Perez Tracy K Smith Jeff VanderMeer Saya Woolfalk and many more Their novels poems installation artworks and expressive media offer a speculative world built on livable communities rather than engineered lifeforms
