

Petrel Mapping Module by Petrosys®

Advanced presentation-quality mapping

APPLICATIONS

- Extends existing Petrel® E&P software platform mapping capabilities
- Enables the editing and creation of high-quality maps
- Generates PDF, images, and scaled print outputs

BENEFITS

- Improved mapping experience through tight integration of data, process, and user interface
- Reprojection of 2D surfaces, 3D grid horizons, and seismic interpretation in any coordinate reference system
- Presentation-quality maps through the use of mapping templates that effectively present subsurface context and potential

FEATURES

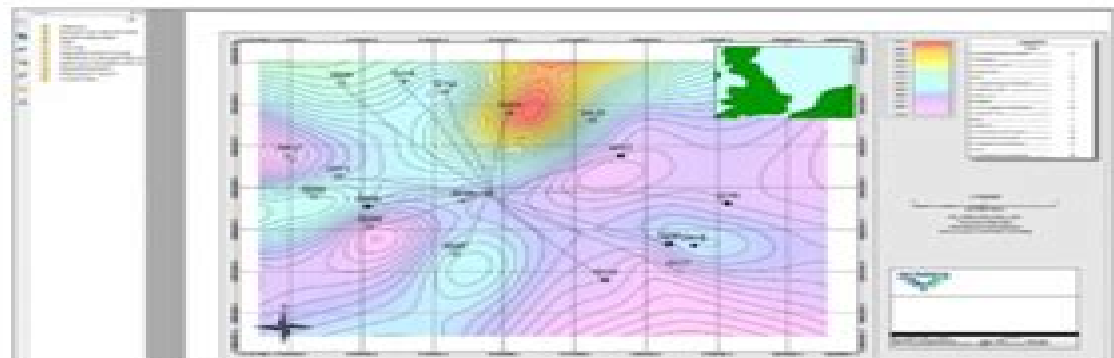

- Flexible map legend templates customized to meet organization standards
- Sophisticated overposting control
- Contour editing and cleanup
- Contouring up to faults and fault direction indicators
- Fine control of fonts, colors, and line styles for all mapping elements
- Thematic mapping of culture data

The Petrel Mapping Module by Petrosys® extends existing Petrel mapping capabilities by integrating advanced mapping capabilities from the industry-leading mapping package developed by Petrosys®. The primary workflow for this new map window in Petrel is the production of high-quality mapping output for scaled printing, PDFs, or images.

Through tight integration of data, process, and user interface, the Petrosys® map window allows the reprojection of 2D surfaces, 3D grid horizons, and seismic interpretation in any coordinate reference system. High-quality mapping templates provide presentation-quality maps that effectively present subsurface context and potential, including annotated well locations and well tops, cultural data, customized map legends, and an inset map.

High-quality maps through advanced mapping styles and controls

Quality contouring up to faults is essential in subsurface cartography, and it requires that advanced mapping and editing tools be available where you need them. The Petrel Mapping Module by Petrosys® enables data selections from the Petrel data trees in an integrated mapping window for an effective presentation of subsurface context and potential. The advanced editing capabilities enable fine control of fonts, colors, and line styles for all map elements, as well as full layering control. This makes it easy to perform map-based contour editing and cleanup of artifacts or drive changes to the underlying surfaces. The production of quality contour maps along faults is complemented by a large variety of fault throw symbols, as well as options to thematically map cultural data to highlight trends. Advanced possibilities for overpost correction add to the professional-quality cartographic output.

PDF outputs preserve the map layers from the original; users can turn on/off different layers directly from the PDF viewer.
