[Animal Toxins in Food](#) Gulzar Ahmad Nayik, Jasmeet Kour, 2022-04-18 The prevalence of naturally occurring toxins in plant and animal foods represents one of the most significant food safety issues drawing the attention of both scientists and regulators alike This unexplored area related to food quality is indeed a big concern for consumers various regulatory authorities and food industries Apart from essential nutrients several food crops are capable of producing a vast array of nonnutritious secondary metabolic products These toxins produced as secondary metabolites have the potential to exhibit both beneficial and deleterious effects in both human beings and animals Nevertheless there has been huge progress in agricultural practices and food processing technologies but still the number of nonnutritive substances and naturally derived toxins persist in our diet Handbook of Plant and Animal Toxins in Food Occurrence Toxicity and Prevention focuses on

various selected toxins in foods derived from plants as well as animals The prominent plant toxins include solanine and chaconine mushroom toxins phytates tannins oxalates goitrogens gossypol phytohemagglutinins erucic acid saponins cyanogenic glycosides enzyme inhibitors BOAA lathrogens toxic amino acids and toxic fatty acids The prominent animal toxins covered in the book include various seafood toxins shellfish toxins and biogenic amines Key Features Presents complete information about a plethora of toxins Provides quick and easy access to data on major plant and animal toxins Covers distribution of toxins in the plant and animal kingdom Provides comprehensive information on chemistry safety and precautions of each toxin Commencing with a brief introduction of food toxins this book is designed in such a way that the readers will be introduced to toxicity safety and occurrence of each toxin selected It also discusses the in depth detailed information on food poisoning and its prevention The book will also shed light on foodborne illness associated with toxins The primary audience for this work will be food scientists food toxicologists university scholars and college students Furthermore the book will be of immense help for public health officials pharmacologists and food safety officers who are involved with enforcing regulations meant to ensure the safety of a particular food

Land Cover and Land Use Change on Islands

Stephen J. Walsh, Diego Riveros-Iregui, Javier Arce-Nazario, Philip H. Page, 2020-07-16 Globalization is not a new phenomenon but it is posing new challenges to humans and natural ecosystems in the 21st century From climate change to increasingly mobile human populations to the global economy the relationship between humans and their environment is being modified in ways that will have long term impacts on ecological health biodiversity ecosystem goods and services population vulnerability and sustainability These changes and challenges are perhaps nowhere more evident than in island ecosystems Buffeted by rising ocean temperatures extreme weather events sea level rise climate change tourism population migration invasive species and resource limitations islands represent both the greatest vulnerability to globalization and also the greatest scientific opportunity to study the significance of global changes on

ecosystem processes human environment interactions conservation environmental policy and island sustainability In this book we study islands through the lens of Land Cover Land Use Change LCLUC and the multi scale and multi thematic drivers of change In addition to assessing the key processes that shape and re shape island ecosystems and their land cover land use changes the book highlights measurement and assessment methods to characterize patterns and trajectories of change and models to examine the social ecological drivers of change on islands For instance chapters report on the results of a meta analysis to examine trends in published literature on islands a satellite image time series to track changes in urbanization social surveys to support household analyses field sampling to represent the state of resources and their limitations on islands and dynamic systems models to link socio economic data to LCLUC patterns The authors report on a diversity of islands conditions and circumstances that affect LCLUC patterns and processes often informed through perspectives rooted for instance in conservation demography ecology economics geography policy and sociology

The Action Plan for

Australian Birds 2020 Stephen T. Garnett, G Barry Baker, 2021-12-01 The Action Plan for Australian Birds 2020 is the most comprehensive review of the status of Australia's avifauna ever attempted. The latest in a series of action plans for Australian birds that have been produced every decade since 1992, it is also the largest. The accounts in this plan have been authored by more than 300 of the most knowledgeable bird experts in the country and feature far more detail than any of the earlier plans. This volume also includes accounts of over 60 taxa that are no longer considered threatened, mainly thanks to sustained conservation action over many decades. This extensive book covers key themes that have emerged in the last decade, including the increasing impact of climate change as a threatening process, most obviously in Queensland's tropical rainforests where many birds are being pushed up the mountains. However, the effects are also indirect, as happened in the catastrophic fires of 2019-20. Many of the newly listed birds are subspecies confined to Kangaroo Island, where fire destroyed over half the population. But there are good news stories too, especially on islands where there have been spectacular successes with predator control. Such uplifting results demonstrate that when action plans are followed by action on the ground, threatened species can indeed be recovered and threats alleviated.
