Peripheral Neuropathy Neuropathic Pain Into The Light:

Peripheral Neuropathy & Neuropathic Pain Professor Gérard Said, 2014-09-01 Written by one of the world's leading experts Professor Gérard Said MD FRCP Dpt de Neurologie H pital de la Salp tri re Paris France Peripheral neuropathy is a common medical condition the diagnosis of which is often protracted or delayed It is not always easy to relate a neuropathy to a specific cause Many people do not receive a full diagnosis their neuropathy often being described as idiopathic or cryptogenic It is said that in Europe one of the most common causes is diabetes mellitus but there are also many other known potential causes The difficulty of diagnosis the limited number of treatment options a perceived lack of knowledge of the subject except in specialised clinics the number of which are limited all add to the difficulties which many neuropathy patients have to face Another additional problem for many patients is that once having received a full or even a partial diagnosis they are then often discharged back to their primary healthcare team who in many instances know little about this condition and how it may impact upon their patients lives In order to help bridge this gap in medical knowledge and to give healthcare providers a better understanding of this often distressing condition The Neuropathy Trust has commissioned a new book on this complex topic Written by one of the world's leading experts on neuropathy Professor Gérard Said it is a must read and also a handy reference book for doctors nurses physiotherapists chiropractors podiatrists and other health professionals As well as covering the anatomy of the nervous system and the basic pathological processes that may affect the peripheral nerves the book covers a whole range of neuropathic conditions These include for example Guillain Barr syndrome chronic inflammatory demyelinating polyneuropathy vasculitic neuropathies infectious neuropathies diabetic and other metabolic neuropathies hereditary neuropathies and neuropathies in patients with cancer Given the almost explosive increase in diabetes predicted over the coming years and the high incidence of HIV infections alone not to mention all the other possible causes of peripheral neuropathy no self respecting medical unit should be without a copy of this new book on their shelves The author Professor Gérard Said is based in the Department of Neurology at the prestigious H pital de la Salp tri re in Paris He has devoted a lifetime to the study of peripheral neuropathy and alongside other great neurological names added much to the world's ever growing store of knowledge on this complex but fascinating condition which affects so many individuals

Neuropathic Pain Jianguo Cheng, 2019-01-21 Neuropathic pain is one of the most common most debilitating most costly and most difficult to treat categories of chronic pain conditions that are characterized by a lesion or disease of the somatosensory nervous system Managing neuropathic pain is challenging and requires skillful assessment and comprehensive and integrated treatment strategies that are mechanism guided evidence based and individualized However these critical and integral elements are very fragmented in the current literature The mechanistic understanding of neuropathic pain is typically found in basic research articles Clinical research evidence is presented in forms of clinical trials with emphasis on minimizing biases such as those from patient selection and assessment Individualized considerations for each patient are usually presented in case reports and problem based learning discussions This book overcomes these barriers and integrates all the critical elements around individual patient care into a coherent management strategy that is practical and applicable to daily clinical practice Rather than compiling what have been published in the literature this work emphasizes on identifying and highlighting the key points or findings that guide decision making in clinical practice It integrates the key points around a typical case scenario that not only represents the core of the diagnostic and therapeutic processes but also allows introduction and differentiation of painful conditions that bare similarities with the case in hand The overarching goal is to improve clinical outcomes through better understanding of the mechanisms more accurate diagnosis and wiser and more comprehensive treatment strategies

Neuropathic Pain Robert H. Dworkin, 2012-05-11 The incidence of neuropathic pain continues to rise yet it is an affliction often misdiagnosed or inadequately treated Although in recent years considerable research has been dedicated to understanding its mechanisms there have been few advances in treatment The

contributors to this book are internationally renowned leaders in the fields of peripheral neuropathy and neuropathic pain. They discuss clinical approaches to diagnosis and treatment of neuropathic pain, its underlying mechanisms, and strategies for prevention. In addition, chapters cover timely issues including legal and ethical concerns surrounding pain treatment, the status of clinical trial methods, and educational efforts. Comprehensive yet concise, this book serves as a guide for diagnostic approaches and treatment of neuropathic pain for the student, resident, practicing physician, researcher, and specialist.

Advances in Chronic and Neuropathic Pain Jeimylo de Castro, Yasser El Miedany, 2022-09-21. This book is an in-depth guide to chronic and neuropathic pain. The issue of chronic and neuropathic pain is very prevalent, yet only a fraction of the symptoms and root causes, as well as potential treatment plans, are properly understood. Additionally, less than half of cases are accurately identified and properly treated. The existing drugs, although classified as very strong and powerful, cannot provide lasting relief to chronic and neuropathic pain. Thus, with all the unique features of this condition, this book presents a systematic way of diagnosing and approaching this condition so every practitioner can appropriately treat their patients. In addition to introducing key concepts like classification of chronic pain and the challenges patients and practitioners face when dealing with and treating chronic and neuropathic pain, this book also covers different syndromes that can lead to neuropathic pains. It discusses how to monitor progress by using outcome measures, the presence of chronic and neuropathic pain in children and young adults, and the pathophysiology of neuropathic pain as it relates to the release of pro-inflammatory cytokines. Interestingly, the latter is not presently addressed except with the usual pain drugs for general pain; this book aims to revolutionize the approach to chronic and neuropathic pain by exploring it separately from the clinical approach to general pain. It is interesting to note that these cytokines require a specific mode of action if we want to neutralize them in our system, and this concept will be discussed in the regenerative intervention sections. Since it is so necessary to address the many factors to chronic and neuropathic pain as laid out in the proposed table of contents, it is also critical to include as varied authors as possible to address this condition from all areas being covered. The team assembled to author the chapters included in this text come from diverse backgrounds of practice and clinical and research interests from physical medicine and rehabilitation to anesthesiology to radiology and interventional pain medicine. This is an ideal guide for all clinicians caring for patients with chronic and neuropathic pain.
