and environmentally friendly flame retardant additives is an active multidisciplinary approach that has attracted a great deal of interest. Studies have aimed at the development of new sustainable and flame retardant additives materials providing high performance and low toxicity. Also studied were their properties during ageing and recycling as well as modeling physical and chemical processes occurring before ignition and during their combustion. The development of sustainable flame retardants and understanding their modes of action provide a strong link between these topics and cover many fields from organic chemistry materials engineering and toxicology to physics and mathematics.

Chromatography of Organometallic Compounds T. R. Crompton, 2012-12-06 Since its introduction into the armoury of the analytical chemist approximately two decades ago the technique of gas chromatography has found very extensive applications in the analysis of most types of organic compounds. One of the few remaining limitations of the technique when applied to such compounds namely the analysis of very highly boiling and or thermally unstable substances has been overcome in many instances by the introduction of techniques such as silylation for the conversion of sample components to lower boiling or more stable substances which can be gas chromatographed at reasonably low temperatures. All of this has been extensively dealt with in many books published during recent years dealing with the theory and practice of applying gas chromatography to the analysis and preparative separation of organic compounds. In parallel with these developments there has occurred particularly over the past decade a growing interest in the application of gas chromatography to the analysis of organometallic compounds. Indeed for many types of organometallic compounds gas chromatography is the analytical method of choice particularly as so often happens when the sample is a mixture. To the author's knowledge no complete review exists of the published work in this very interesting new field a situation it is hoped the present volume will rectify.
