The Tech Coup Marietje Schaake, 2025-09-16 A tech insider who has been hailed by *The New Yorker* for her forceful critique of Big Tech describes what must be done to stop its erosion of democracy Over the past decades under the cover of innovation technology companies have successfully resisted regulation and have

even begun to seize power from governments themselves Facial recognition firms track citizens for police surveillance Cryptocurrency has wiped out the personal savings of millions and threatens the stability of the global financial system Spyware companies sell digital intelligence tools to anyone who can afford them This new reality where unregulated technology has become a forceful instrument for autocrats around the world is terrible news for democracies and citizens In The Tech Coup Marietje Schaake offers a behind the scenes account of how technology companies crept into nearly every corner of our lives and our governments She takes us beyond the headlines to high stakes meetings with human rights defenders business leaders computer scientists and politicians to show how technologies from social media to artificial intelligence have gone from being heralded as utopian to undermining the pillars of our democracies To reverse this existential power imbalance Schaake outlines game changing solutions to empower elected officials and citizens alike Democratic leaders can and must resist the influence of corporate lobbying and reinvent themselves as dynamic flexible guardians of our digital world Drawing on her experiences in the halls of the European Parliament and among Silicon Valley insiders Schaake offers a frightening look at our modern tech obsessed world and a clear eyed view of how democracies can build a better future before it is too late

Empire of AI Karen Hao, 2025-05-20 An Instant New York Times Bestseller A bestselling page turner that has made waves not just in Silicon Valley but around the world With Empire of AI Hao is fundamentally shaping many people's perceptions and understanding of the company at the center of the AI revolution TIME Magazine TIME100 AI 2025 Excellent and deeply reported Tim Wu The New York Times Startling and intensely researched an essential account of how OpenAI and ChatGPT came to be and the catastrophic places they will likely take us Vulture Hao's reporting inside OpenAI is exceptional and she's persuasive in her argument that the public should focus less on AI's putative sentience and more on its implications for labor and the environment Benjamin Wallace Wells New Yorker From a brilliant longtime AI insider with intimate access to the world of Sam Altman's OpenAI from the beginning an eye opening account of arguably the most fateful tech arms race in history reshaping the planet in real time from the cockpit of the company that is driving the frenzy When AI expert and investigative journalist Karen Hao first began covering OpenAI in 2019 she thought they were the good guys Founded as a nonprofit with safety enshrined as its core mission the organization was meant its leader Sam Altman told us to act as a check against more purely mercantile and potentially dangerous forces What could go wrong Over time Hao began to wrestle ever more deeply with that question Increasingly she realized that the core truth of this massively disruptive sector is that its vision of success requires an almost unprecedented amount of resources the compute power of high end chips and the processing capacity to create massive large language models the sheer volume of data that needs to be amassed at scale the humans cleaning up that data for sweatshop wages throughout the Global South and a truly alarming spike in the usage of energy and water underlying it all The truth is that we have entered a new and ominous age of empire only a small handful of globally scaled companies can even enter the field of play

At the head of the pack with its ChatGPT breakthrough how would OpenAI resist such temptations Spoiler alert it didn't Armed with Microsoft's billions OpenAI is setting a breakneck pace chased by a small group of the most valuable companies in human history toward what end not even they can define All this time Hao has maintained her deep sourcing within the company and the industry and so she was in intimate contact with the story that shocked the entire tech industry Altman's sudden firing and triumphant return The behind the scenes story of what happened told here in full for the first time is revelatory of who the people controlling this technology really are But this isn't just the story of a single company however fascinating it is The forces pressing down on the people of OpenAI are deforming the judgment of everyone else too as such forces do Naked power finds the ideology to cloak itself no one thinks they're the bad guy But in the meantime as Hao shows through intrepid reporting on the ground around the world the enormous wheels of extraction grind on By drawing on the viewpoints of Silicon Valley engineers Kenyan data laborers and Chilean water activists Hao presents the fullest picture of AI and its impact we've seen to date alongside a trenchant analysis of where things are headed An astonishing eyewitness view from both up in the command capsule of the new economy and down where the real suffering happens Empire of AI pierces the veil of the industry defining our era

The Play of Conscience in Shakespeare's England Jade Standing,2023-12-29 Having a conscience distinguishes humans from the most advanced AI systems Acting in good conscience consulting one s conscience and being conscience wracked are all aspects of human intelligence that involve reckoning deriving general laws from particular inputs and vice versa and judgement contemplating the relationship of the reckoning system to the world While AI developers have mastered reckoning they are still working towards the creation of judgement This book sheds light on the reckoning and judgement of conscience by demonstrating how these concepts are explored in Everyman Doctor Faustus The Merchant of Venice and Hamlet Academic student or general interest readers discover the complexity and multiplicity of the early modern concept of conscience which is informed by the scholastic intellectual tradition juridical procedures of the court of Chancery the practical advice of Protestant casuistry and Reformation theology The aims are to examine the rubrics for thinking through regulating and judging actions that define the various consciences of Shakespeare s day to use these rubrics to interpret questions of truth and action in early modern plays and to offer insights into what it is about conscience that developers want to grasp to eliminate the difference between human and non human intelligences and achieve true AI

Today s critics of big online platforms tend to consider privacy breaches monopolistic practices and the deployment of surveillance technologies as the main problems Internet reformers suggest the answers to these issues reside in more and better regulations While the questions of privacy data and size are indeed important they are secondary however to a deeper set of concerns about platform ownership and control and who benefits from the current status quo This book examines these issues and offers an historical overview and in depth analysis of digital capitalism and its prevailing practices as it has become increasingly intertwined with various forms of online surveillance behavior modification and the delegation of

managerial functions to algorithmic and automated systems in platform economies The approach taken extends to the wider array of data driven internet connected and automated systems that involve digital devices and technologies centered on three smart spaces the smart self the smart home and the smart city Antitrust and other regulatory measures by the European Union and the United States that are aimed at restraining platform capitalism are also discussed The focus in particular is on recent developments regarding artificial intelligence and their potentially harmful implications This is followed by a critical look at proposals for more far reaching institutional reforms revolving around the creation of forms of platform socialism that build partly on existing practices of platform cooperativism The book concludes with a diagnosis of the global situation among the competing digital empires the United States the European Union and China and considers whether or not under the present conditions any form of democratic platform socialism could materialize on a wider scale in the near future
