Peritoneal Carcinomatosis: Drugs and Diseases Paul H. Sugarbaker, 2012-12-06 Peritoneal carcinomatosis dominates the clinical picture of many patients with gastrointestinal gynecological and urological cancers For many of them its devastating effects contribute directly to their death Most clinicians consider peritoneal carcinomatosis an incurable metastatic disease and give palliative treatment restricted to limited surgery and systemic chemotherapy Contrary to this view Paul Sugarbaker and his colleagues base their approach on the concept that peritoneal carcinomatosis represents regional tumor spread similar in its impact on treatment and prognosis to that of lymph node metastases in other malignancies This concept emphasises the value of regional tumor control as a potentially curative measure In this book the combination of aggressive cytoreduction and intraperitoneal chemotherapy to control peritoneal carcinomatosis is extensively explored Basic to this approach is the observation that most cancer cells show only relative resistance against commonly available drugs which can be overcome by a sufficient increase of drug concentrations in tumor tissue After intraperitoneal delivery drugs will reach high tissue concentrations in the superficial few cell layers while plasma concentrations will remain below toxic levels Patients with only limited residual tumor at the peritoneal surface after cytoreduction may therefore benefit from intraperitoneal chemotherapy

Peritoneal Carcinomatosis: Principles and management Paul H. Sugarbaker, 1996

Sugarbaker,1995-10-01 The dissemination of cancer on peritoneal surfaces has hitherto been regarded as a terminal condition Only a few patients with ovarian cancer a disease where there is extreme drug sensitivity have been maintained in a disease free state over the long term The tumour biology questions are as follows Is the dissemination of cancer on peritoneal surfaces to be regarded as finite spread of malignancy or as evidence of systematic disease Is peritoneal carcinomatosis in selected patients a limited process that can be treated for cure using surgery and chemotherapy Can treatments lead to a complete resolution of the cancerous process Most oncologists would regard peritoneal carcinomatosis as a condition that can only be palliated This book presents the principles that support aggressive management plans with disease eradication as an end point New technologies have emerged bringing about this conceptual change in thinking Technologies have been developed for complete chemotherapeutic treatment of all peritoneal surfaces Technologies have been developed for uncovering minute foci of disease in remote portions of the abdomen Also new surgical and electrosurgical techniques are important aspects of this revised management plan Even the data management tools required
