Nutrition and Fish Health Carl D Webster, Chhorn Lim, 2001-07-25 Safeguard the success of aquaculture operations without expensive antibiotics Diseases are a major threat to the sustainability of the aquaculture industry Because antibiotics have many drawbacks increasing importance is being placed on understanding the mechanisms that make nutrition a key factor in host defense against pathogens Nutr Diagnostic Manual for Aquatic Animal Diseases, 2000 *Manual of Diagnostic Tests for Aquatic Animals*, 2003 **Nucleic Acid Amplification Technologies** Helen H. Lee, Stephen A. Morse, Ørjan Olsvik, 1997-07-15 Providing current information and guidance on the uses of various nucleic acid amplification technologies for clinical laboratory diagnosis this book goes beyond the Polymerase Chain Reaction to explore a broader range of important alternative DNA RNA amplification methods including the Ligase Chain Reaction Q beta Replicase Assays and TMA There are many examples of specific applications of these technologies discussions of yet unresolved issues and demonstrations of the relevance of these technologies to medical research and disease diagnostics Individual chapters cover uses of these methods in clinical situations such as detection of food pathogens viral infections STDs Mycobacteria drug resistance mutations and heritable diseases Automation diagnostic test evaluation and the synthesis of artificial DNA are also discussed This book is designed for all biomedical scientists interested in the application of molecular biology to clinical diagnosis PCR Technology Thomas Weissensteiner, Tania Nolan, Stephen A. Bustin, Hugh G. Griffin, Annette Griffin, 2003-11-13 A technique used to amplify the number of copies of a specific region of DNA the polymerase chain reaction PCR is at the forefront of the dramatic development of biochemistry This text provides the tools for developing innovative approaches to using this leading technology It includes theoretical considerations discussions and a selection of **Functional Genomics**, 2000-10-19 With the complete genomes of many organisms now available and the first draft of the human genome imminent there is an increasing demand from researchers in a range of disciplines for techniques that will allow them to utilize these resources in their own research This book provides a comprehensive treatment of the range of methods available for gene and protein expression profiling in a variety of systems These include large scale methods such as cDNA microarrays serial analysis of gene expression SAGE and proteomics and also methods suitable for non specialist laboratories such as differential display and suppression subtraction hybridization In all cases the chapters have been written by the developers of these methods or experienced users and include detailed protocols to facilitate the introduction of these methods to the readers laboratories Adhesion Protein Protocols Elisabetta Dejana, Monica Corada, 2008-02-03 Adhesion molecules are of fundamental importance in the regulation of immunity inflammation tissue remodeling and embryonic development They comprise different families of homologous proteins such as selectins integrins cadherins and immunoglobins In addition beyond these groups other structures with adhesive properties such as proteoglycans occludin and CD44 have been characterized recently An understanding of the type and characteristics of adhesive molecules expressed by

the different cell types and the possibility of manipulating their activity promises considerable clinical potential Antibodies small peptidic and nonpeptidic molecules have recently been used to inhibit thrombosis by blocking platelet aggregation or inflammation through inhibition of leukocyte infiltration and adhesion Inhibitors of adhesive molecules are used in experimental systems for the study of tumor growth and dissemination Among major goals in the field are the identification of new members of the known adhesive protein families and of independent new adhesive structures After structural characterization even more demanding is the study of the biological activity of the new proteins and the development of simple rapid tests for the screening of possible inhibitors In this regard the production of such reagents as fragments and antibodies would help define the structure function relationship of individual proteins Data available in the literature show the complexity of the adhesive process and how different molecular epitopes might contribute to the adhesive properties of a single structure Finally a new area of investigation is the characterization of the intracellular signaling cascade triggered by the engagement of transmembrane adhesive proteins The Uteroglobin/Clara Cell Protein Family Anil B.

Mukherjee, Beverly S. Chilton, 2000 The discovery of this family of proteins three decades ago launched a broad range of research effort that now reaches across many potential applications in human reproductive biology inflammatory diseases endocrinology and in oncology These proceedings papers extend the new function research possibilities inherent in the structure of this steroid inducible multifunctional secreted protein and in the UG bioactive derived peptides An opening overview of the UG family focuses on mammaglobin and its implications with human breast cancer the sequence structure sections review applications of antinflamin responses from its peptide Other sections present new research on regulation of uteroglobin genes by cytokines and hormones and clinical applications for renal diseases in targeting gene therapy in pulmonary disease Together these developments raise the possibility of cytokine chemokine like functions that play important roles in major public health problems A consensus of nomenclature for Uteroglobin Clara Cell 10kDa family of proteins is also advanced as a step to coordinating new areas of research for these promising proteins and receptors

Weissman, 1999-05-17 Knowledge of mRNA structure genomic location and patterns of expression must be converted into information regarding the function of the encoded proteins Each gene can be the subject of years of intensive study Nevertheless a number of methods are being developed that use cDNA to predict properties or permit the selective isolation of cDNAs encoding proteins with certain general properties such as subcellular location The technology in this field is rapidly evolving and these contributions represent a snapshot in time of the number of currently available and useful approaches to the problems referred to above *Molecular Biology of the Cell*, 2001 **Anticancer Research**, 2009 *Simultaneous Sulfate Reduction and Metal Precipitation in an Inverse Fluidized Bed Reactor* Denys Kristalia Villa Gomez, 2022-01-26

Industrial activities like textile processing and mining are typical sources of heavy metal rich wastewaters. The sulfate reducing process has become an attractive method for the production of sulfide to precipitate metals since most of these streams also contain sulfate which is the electron acceptor and in less common cases chemical oxygen demand which is the electron donor of sulfate reducing bacteria. The inverse fluidized bed IFB reactor is a system for the production of biogenic sulfide and metal precipitation in the same unit due to its configuration the biomass floats on top of the reactor whereas metal sulfide precipitates settle and thus can be recovered at the bottom. The main objective of this thesis was to elucidate the factors affecting simultaneous sulfate reduction and precipitation of heavy metals in an IFB reactor in order to optimize the metal recovery from wastewaters such as acid mine drainage. Therefore this thesis focused on varying different operational conditions to study their effect on the solid liquid separation and purity of the metal sulfide precipitates as well as on their effect on the sulfate reducing process. Furthermore one chapter was focused on the study of strategies for sulfide control in the IFB reactor. In addition recommendations for further research to improve the recovery of the metal sulfides in bioreactors are given.
