Plunkett's Sports Industry Almanac: Sports Industry Market Research, Statistics, Trends & Leading Companies Jack W. Plunkett,2007-06 A market research guide to the business side of sports teams marketing and equipment a tool for strategic

planning competitive intelligence employment searches or financial research It contains trends statistical tables and an industry glossary It includes over 350 one page profiles of sports industry firms companies and organizations F&S Index United States Annual ,1999 *Internet for Kids - Panduan Mengajarkan Internet pada Anak* Yudhi Herwibowo,Toni Hendroyono, **Determinants of Ticket Price Fluctuation in the Secondary Market** Dongho Yoo,2012 Each Major League Baseball MLB team has 81 home games in each season and they are not 81 units of the same product but 81 different products Fans value differently each of 81 home games but what factors fans consider in this valuation have not been investigated much Numerous studies have focused on factors that motivate fans to come to the game in general but not many studies have focused on factors influencing game by game fluctuation within a season The purpose of this study is to examine factors found from the previous literature influencing the secondary market ticket price fluctuation for individual MLB games In this research the author used the ticket prices of the secondary market as dependent variables The secondary market is the platform for buying and selling tickets that previously were obtained from the franchise team the primary market The ticket prices of the primary market are relatively constant throughout the season but the ticket prices of the secondary market radically fluctuate according to fans willingness to pay for games Therefore the secondary market can be a good indicator reflecting fans perceived value fluctuation game by game After the factors were found from the literature they were statistically analyzed through regression analysis to see if they had a significant effect on the ticket price fluctuations Additionally MLB teams were divided into three groups by teams attendance level The author investigated how the level of teams popularity influences fans preference *A New Age of Demand-Based Pricing* Stephen L. Shapiro,2016 In 2010 the San Francisco Giants became the first professional team to implement a comprehensive demand based ticket pricing strategy called dynamic ticket pricing DTP In an effort to understand DTP as a price setting strategy the current investigation explored Giants ticket prices during the 2010 season First the relationship between fixed ticket prices dynamic ticket prices and secondary market ticket prices for comparable seats were examined In addition seat location and price changes over time were examined to identify potential effects on ticket price in the primary and secondary market Giants ticket price data were collected for various games throughout the 2010 season A purposive selection of 12 games which included N 1 316 ticket price observations were chosen in an effort to include a multitude of game settings Two ANOVA models were developed to examine price differences based on pricing structure market section and time Findings showed significant differences between fixed ticket prices dynamic ticket prices and secondary market ticket prices with fixed ticket prices on the low end and secondary market ticket prices on the high end of the pricing spectrum Furthermore time was found to have a significant influence on ticket price however the influence of time varied by market and seat location These findings are discussed and both theoretical and practical implications are considered **Designing and Evaluating Dynamic Pricing Policies for Major League Baseball Tickets** Joseph Xu,2018 Many firms have difficulty evaluating the impact of their

pricing policy which further inhibits their ability to design and implement dynamic pricing We address this issue in the context of single game ticket pricing for a Major League Baseball franchise We develop and estimate a comprehensive demand model to help evaluate and design dynamic pricing policies for the franchise Our model encompasses all relevant aspects of the demand generation process including ticket quantity and stadium seat section choice The demand model reveals factors that drive sports ticket revenue such as the effect of home team performance on overall price sensitivity and the relationship between customers arrival timing and product choice We show that by leveraging these insights and allowing sufficient pricing flexibility the franchise can achieve a potential revenue improvement of 17.2% through daily price re optimization which is comparable to the outcome of a clairvoyant policy in which the future evolution of demand is assumed to be known

**An Examination of Dynamic Ticket Pricing and Secondary Market Price Determinants in Major League Baseball** Stephen L. Shapiro, 2016 Over the past several years professional sport organizations have started to shift from cost based ticket pricing strategies to a demand based focus where price considerations are driven in part by market demand Dynamic ticket pricing DTP where prices fluctuate daily based on market factors evolved from this transition The motivation for DTP stems from the significant growth of the secondary ticket market where ticket prices are almost completely demand driven One issue with this strategy is the limited understanding of specific factors that influence dynamically priced tickets and secondary market tickets The current study examined price determinants in the primary market where DTP has been implemented and comparable tickets in the secondary market Four regression models were developed for this purpose The first two models examined factors influencing dynamic ticket price Both DTP models were found to be significant explaining 91.4% and 70.8% of the variance in dynamic price respectively The second two models examined factors influencing secondary market ticket price Both secondary market models were found to be significant explaining 82.7% and 79.7% of the variance in secondary market price respectively There were many consistencies between models including an emphasis on team and individual performance factors ticket related factors and time related factors However there were a number of unique aspects to each model which may help sport managers develop pricing strategies that better reflect market demand for sport

**Variable Ticket Pricing in Major League Baseball** Daniel A.

Rascher, Chad D. McEvoy, Mark Nagel, Matthew T. Brown, 2006 Sport teams have historically been reluctant to change ticket prices during the season Recently however numerous sport organizations have implemented variable ticket pricing in an effort to maximize revenues In Major League Baseball variable pricing results in ticket price increases or decreases depending on factors such as quality of the opponent day of the week month of the year and for special events such as opening day Memorial Day and Independence Day July 4 Using censored regression and elasticity analysis this paper demonstrates that variable pricing would have yielded approximately 590,000 per year in additional ticket revenue for each Major League team in 1996 ceteris paribus Accounting for capacity constraints this amounts to only about a 2.8% increase

above what occurs when prices are not varied For the 1996 season the largest revenue gain would have been the Cleveland Indians who would have generated an extra 1.4 million in revenue The largest percentage revenue gain would have been the San Francisco Giants The Giants would have seen an estimated 6.7% increase in revenue had they used optimal variable pricing

*Equilibrium Price Dynamics in Perishable Goods Market* Andrew Sweeting, 2008 This paper analyzes the dynamics of prices in two online secondary markets for Major League Baseball tickets Controlling for ticket quality prices tend to decline significantly as a game approaches The paper describes and tests alternative theoretical explanations for why this happens in equilibrium considering the problems of both buyers and sellers It shows that sellers cut prices either fixed prices or reserve prices in auctions because of declining opportunity costs of holding onto tickets as their future selling opportunities disappear Even though prices can be expected to fall the majority of observed early purchases can be rationalized by plausible ticket valuations and return to market costs given product differentiation and uncertainties about ticket availability
