Intercultural Rhetoric and Professional Communication: Technological Advances and Organizational Behavior

Thatcher, Barry, 2011-12-31 This book explores the theory and practice of rhetoric and professional communication in intercultural contexts providing a framework for translating localizing and internationalizing communications and information products around the world Provided by publisher *Field & Stream*, 1989-03 FIELD STREAM America's largest outdoor sports magazine celebrates the outdoor experience with great stories compelling photography and sound advice while honoring the traditions hunters and fishermen have passed down for generations *Impedance spectroscopy for characterization of biological matter* Juan Jose Montero Rodriguez, 2018 Standard characterization methods of biological cells are time consuming and may reduce cell viability by staining them with markers An alternative fast and non destructive method is developed using impedance spectroscopy which has potential applications in biology The technique is used to identify tumor cells in mice detect bacterial eye infections monitor fruit ripening and measure sweat lactate concentration in humans by using a skin sensor These applications often require a portable measurement system Therefore three portable systems were designed and tested It has been shown that the method can be further improved by four terminal measurements For extension of the method in the millimeter wave frequencies full electromagnetic simulation of the chip has been carried out and electrodes and interconnections have been adjusted accordingly **Revolutions in Product Design**

The Evolution of Travel Time Information Systems Margarita Martínez-Díaz, 2022-01-21 This book deals with the estimation of travel time in a very comprehensive and exhaustive way Travel time information is and will continue to be one key indicator of the quality of service of a road network and a highly valued knowledge for drivers Moreover travel times are key inputs for comprehensive traffic management systems All the above mentioned aspects are covered in this book The first chapters expound on the different types of travel time information that traffic management centers work with their estimation their utility and their dissemination They also remark those aspects in which this information should be improved especially considering future cooperative driving environments Next the book introduces and validates two new methodologies designed to improve current travel time information systems which additionally have a high degree of applicability since they use data from widely disseminated sources they could be immediately implemented by many administrations without the need for large investments Finally travel times are addressed in the context of dynamic traffic management systems The evolution of these systems in parallel with technological and communication advancements is thoroughly discussed Special attention is paid to data analytics and models including data driven approaches aimed at understanding and predicting travel patterns in urban scenarios Additionally the role of dynamic origin to destination matrices in these schemes is analyzed in detail

User Protection in IT Contracts: A Comparative Study of the Protection of the User Against Defective Performance in Information Technology Clarisse Girot, 2001-03-06 This volume considers the theme of the protection of the user in the field of Information Technology and more specifically in relation to software licences electronic information services and Internet access services Litigation in IT usually stems from the users feeling that their expectations have been frustrated at performance When dealing with such cases the courts seem

to increasingly take the objective of user protection into account How is this protection implemented Is this trend generally desirable Is this judicial protection excessive What are the constraints met by IT providers that should be taken into account in litigation How can the user s position be improved User Protection in IT Contracts extensively presents the reasons why and the ways in which national courts may decide a case in favour of the user Many practical issues are considered in this respect Which factors appear relevant to deal with liability claims in IT Are exemption clauses always enforceable What are the implications of information duties for IT providers How can general conditions be safely incorporated to a contract This book exhaustively reviews these and other issues in English Dutch and French law *Progress in Systems Engineering* Henry Selvaraj,Dawid Zydek,Grzegorz Chmaj,2014-08-12 This collection of proceedings from the International Conference on Systems Engineering Las Vegas 2014 is orientated toward systems engineering including topics like aero space power systems industrial automation and robotics systems theory control theory artificial intelligence signal processing decision support pattern recognition and machine learning information and communication technologies image processing and computer vision as well as its applications The volume s main focus is on models algorithms and software tools that facilitate efficient and convenient utilization of modern achievements in systems engineering **Discipline and Desire** Elise Morrison,2016-10-12 Focuses on how contemporary artists have responded to the ubiquitous presence of surveillance technologies in our daily lives **Computational Intelligence in Decision and Control** Da Ruan,Javier Montero,2008 FLINS originally an acronym for Fuzzy Logic and Intelligent Technologies in Nuclear Science is now extended to Computational Intelligence for applied research The contributions to the eighth edition in the series of FLINS conferences cover state of the art research development and technology for computational intelligence systems in general and for intelligent decision and control in particular Optimization of Integer/Fractional Order Chaotic Systems by Metaheuristics and their Electronic Realization Esteban Tlelo-Cuautle,Luis Gerardo de la Fraga,Omar Guillén-Fernández,Alejandro Silva-Juárez,2021-05-09 Mathematicians have devised different chaotic systems that are modeled by integer or fractional order differential equations and whose mathematical models can generate chaos or hyperchaos The numerical methods to simulate those integer and fractional order chaotic systems are quite different and their exactness is responsible in the evaluation of characteristics like Lyapunov exponents Kaplan Yorke dimension and entropy One challenge is estimating the step size to run a numerical method It can be done analyzing the eigenvalues of self excited attractors while for hidden attractors it is difficult to evaluate the equilibrium points that are required to formulate the Jacobian matrices Time simulation of fractional order chaotic oscillators also requires estimating a memory length to achieve exact results and it is associated to memories in hardware design In this manner simulating chaotic hyperchaotic oscillators of integer fractional order and with self excited hidden attractors is quite important to evaluate their Lyapunov exponents Kaplan Yorke dimension and entropy Further to improve the dynamics of the oscillators their main characteristics can be optimized

applying metaheuristics which basically consists of varying the values of the coefficients of a mathematical model The optimized models can then be implemented using commercially available amplifiers field programmable analog arrays FPAA field programmable gate arrays FPGA microcontrollers graphic processing units and even using nanometer technology of integrated circuits The book describes the application of different numerical methods to simulate integer fractional order chaotic systems These methods are used within optimization loops to maximize positive Lyapunov exponents Kaplan Yorke dimension and entropy Single and multi objective optimization approaches applying metaheuristics are described as well as their tuning techniques to generate feasible solutions that are suitable for electronic implementation The book details several applications of chaotic oscillators such as in random bit number generators cryptography secure communications robotics and Internet of Things

Near Infrared Detectors Based on Silicon Supersaturated with Transition Metals Daniel Montero

Álvarez,2021-01-08 This thesis makes a significant contribution to the development of cheaper Si based Infrared detectors operating at room temperature In particular the work is focused in the integration of the Ti supersaturated Si material into a CMOS Image Sensor route the technology of choice for imaging nowadays due to its low cost and high resolution First the material is fabricated using ion implantation of Ti atoms at high concentrations Afterwards the crystallinity is recovered by means of a pulsed laser process The material is used to fabricate planar photodiodes which are later characterized using current voltage and quantum efficiency measurements The prototypes showed improved sub bandgap responsivity up to 0.45 eV at room temperature The work is further supported by a collaboration with STMicroelectronics where the supersaturated material was integrated into CMOS based sensors at industry level The results show that Ti supersaturated Si is compatible in terms of contamination process integration and uniformity The devices showed similar performance to non implanted devices in the visible region This fact leaves the door open for further integration of supersaturated materials into CMOS Image Sensors
