Designing for Human Intelligence in an Artificial Intelligence World Jerome L. Rekart, Rebecca Baker, 2025-06-06 How we think and react has a direct impact on experience design but often designers don't understand the whys behind their best practices leaving them at risk for misusing or underutilizing those designs Similarly psychologists neuroscientists don't understand the design decisions that their science is informing and how they might be leveraged further This book explores how neuroscience and cognitive psychology inform experience design within the modern context of research and technological advances With a conversational and playful tone this book begins by grounding you in research and AI That foundation then allows you to expand your repertoire through chapters on design relevant cognitive phenomena such as memory learning and perception By delving into how our brains handle these processes and how our designs can effectively or ineffectively leverage them the book follows a journey that weaves academic learning with practical real world applications and examples With the widespread availability of generative AI tools understanding the intersection of human cognition and design and how that knowledge can be used to build a bridge between the brain and the software has become even more critical By understanding the brain and human behavior more completely designers will be able to effectively use AI as an accelerator for tactical projects and provide the context that is unique to the human ability to understand the why
