Passive Solar Architecture Heating Cooling Ventilation Daylighting And More Using Natural Flows:

Passive Solar Architecture David Bainbridge, Ken Haggard, 2011-08-18 New buildings can be designed to be solar oriented naturally heated and cooled naturally lit and ventilated and made with renewable sustainable materials no matter the location or climate In this comprehensive overview of passive solar design two of America's solar pioneers give homeowners architects designers and builders the keys to successfully harnessing the sun and maximizing climate resources for heating cooling ventilation and daylighting Bainbridge and Haggard draw upon examples from their own experiences as well as those of others of more than three decades to offer both overarching principles as well as the details and formulas needed to successfully design a more comfortable healthy and secure place in which to live laugh dance and be comfortable Even if the power goes off **Passive Solar Architecture** also discusses greener and more sustainable building materials and how to use them and explores the historical roots of green design that have made possible buildings that produce more energy and other resources than they use

Passive Solar Architecture David A. Bainbridge, Kenneth L. Haggard, 2011 Bainbridge and Haggard draw upon examples from their own experiences as well as those of others of more than three decades to offer both overarching principles as well as the details and formulas needed to successfully design a more comfortable healthy and secure place in which to live laugh dance and be comfortable Even if the power goes off

Carbon-Neutral Architectural Design Pablo M. La Roche, 2024-05-31 The energy used to build and operate buildings is a significant source of greenhouse gas emissions While it is possible to reduce emissions through low carbon design many architects are not trained to do this Filling an urgent need for a design reference in this emerging field this book describes how to reduce building related greenhouse gas emissions through appropriate design techniques It presents strategies to achieve CO2 reductions with an emphasis on control of energy flows through the building envelope and passive cooling and heating strategies This new revised edition is updated throughout and includes a new section on embodied carbon and new chapters on daylighting and nature based cooling Features Adds new chapters on daylighting and nature based cooling with numerous updates throughout the rest of the chapters Presents strategies illustrated with examples for new construction and existing buildings to reduce energy consumption and reduce emissions Explains the origins of CO2 emissions associated with the operation and fabrication of buildings supplying water disposing of waste from the building and proposes strategies to reduce them Covers carbon calculations thermal comfort indigenous technology climate responsive design passive cooling and heating solar design air flow analysis daylighting building simulation and microclimate design with abundant examples Examines siting location to design buildings that adapt and mitigate their effect on climate change

Making Better Buildings Chris Magwood, Jen Feigin, 2014-03-25 Sustainable building from the ground up the pros and cons of the latest green and natural materials and technologies

Routledge Handbook of Resilient Thermal Comfort Fergus Nicol, Hom Bahadur Rijal, Susan Roaf, 2022-04-19 This book brings together some of the finest academics in the field to address

important questions around the way in which people experience their physical environments including temperature light air quality acoustics and so forth It is of importance not only to the comfort people feel indoors but also the success of any building as an environment for its stated purpose The way in which comfort is produced and perceived has a profound effect on the energy use of a building and its resilience to the increasing dangers posed by extreme weather events and power outages caused by climate change Research on thermal comfort is particularly important not only for the health and well being of occupants but because energy used for temperature control is responsible for a large part of the total energy budget of the built environment In recent years there has been an increasing focus on the vulnerabilities of the thermal comfort system how and why are buildings failing to provide safe and agreeable thermal environments at an affordable price Achieving comfort in buildings is a complex subject that involves physics behaviour physiology energy conservation climate change and of course architecture and urban design Bringing together the related disciplines in one volume lays strong multi disciplinary foundations for new research and design directions for resilient 21st century architecture This book heralds workable solutions and emerging directions for key fields in building the resilience of households organisations and populations in a heating world

The New Net Zero Bill Maclay, 2014 The new threshold for green building is not just low energy it's net zero energy In *The New Net Zero* sustainable architect Bill Maclay charts the path for designers and builders interested in exploring green design's new frontier net zero energy structures that produce as much energy as they consume and are carbon neutral In a nation where traditional buildings use roughly 40 percent of the total fossil energy the interest in net zero building is growing enormously among both designers interested in addressing climate change and consumers interested in energy efficiency and long term savings Maclay an award winning net zero designer whose buildings have achieved high performance goals at affordable costs makes the case for a net zero future explains net zero building metrics integrated design practices and renewable energy options and shares his lessons learned on net zero teambuilding Designers and builders will find a wealth of state of the art information on such considerations as air water and vapor barriers embodied energy residential and commercial net zero standards monitoring and commissioning insulation options costs and more The comprehensive overview is accompanied by several case studies which include institutional buildings commercial projects and residences Both new building and renovation projects are covered in detail *The New Net Zero* is geared toward professionals exploring net zero design but also suitable for nonprofessionals seeking ideas and strategies on net zero options that are beautiful and renewably powered

The Chelsea Green Reader Ben Watson, 2014-12-02 Chelsea Green the Vermont based independent publisher has always had a nose for authors and subjects that are way ahead of the cultural curve as is evident in this new anthology celebrating the company's first thirty years in publishing The more than one hundred books represented in this collection reflect the many distinct areas in which we have published from literature and memoirs to progressive politics to highly practical books on green building organic gardening and farming food and health

and related subjects all of which reflect our underlying philosophy The politics and practice of sustainable living The Chelsea Green Reader offers a glimpse into our wide ranging list of books and authors and to the important ideas that they express Interesting and worth reading in their own right the individual passages when taken as a whole trace the evolution of a highly successful small publisher something that is almost an oxymoron in these days of corporate buyouts and multinational book groups From the beginning Chelsea Green's books were nationally recognized garnering positive reviews accolades and awards We've published four New York Times bestsellers and our books have set the standard for in depth how to books that remain relevant years often decades beyond their original publication date Chelsea Green was born from a single seed the beauty of craft Craft in writing and editing in a story well told or a thesis superbly expressed writes cofounder and publisher emeritus Ian Baldwin in the book's foreword Today craft continues to inform all aspects of our work design illustration production sales promotion and beyond It has even informed our business model In 2012 Chelsea Green became an employee owned company With the rise of the Internet new media platforms and a constantly shifting bookselling landscape the future of publishing is anything but predictable But if Chelsea Green's books prove anything it is that despite these challenges there remains a hunger for new and important ideas and authors and for the permanence and craftsmanship of the printed word Today our ongoing mission is stronger than ever as we launch into our next thirty years of publishing excellence

Power from the People Greg Pahl, 2012-08-13 Over 90 percent of US power generation comes from large centralized highly polluting nonrenewable sources of energy It is delivered through long brittle transmission lines and then is squandered through inefficiency and waste But it doesn't have to be that way Communities can indeed produce their own local renewable energy *Power from the People* explores how homeowners co-ops nonprofit institutions governments and businesses are putting power in the hands of local communities through distributed energy programs and energy efficiency measures Using examples from around the nation and occasionally from around the world Greg Pahl explains how to plan organize finance and launch community scale energy projects that harvest energy from sun wind water and earth He also explains why community power is a necessary step on the path to energy security and community resilience particularly as we face peak oil cope with climate change and address the need to transition to a more sustainable future This book the second in the Chelsea Green Publishing Company and Post Carbon Institute's Community Resilience Series also profiles numerous communitywide initiatives that can be replicated elsewhere

Proceedings of the ... National Passive Solar Conference, 1996 *Ecologic Architecture* Richard L. Crowther, 1992 Air quality energy conservation and the preservation of the earth's ecosystem are the main principles demonstrated in this book through design guidelines examples and case studies The scope of the book includes everything from planning and landscaping to product selection and systems design

Teaching Passive Design in Architecture: Project journal, 1981 *Passive Solar Design for Multi-family Buildings* Roland E. Rouse, 1983 *The World Turns to Solar* John Hayes, 1982 *Urja*, 1981 *Energy in Architecture* John R. Goulding, J.

Owen Lewis, T. C. Steemers, 1992 A detailed design guide to energy efficient passive solar architecture drawing together essential information from leading European practitioners and world experts **The New Atrium** Michael J. Bednar, 1986

The Energy Design Handbook Donald Watson, 1993 *Architecture and the Environment* David Lloyd Jones, 1998
Green architecture has commonly been seen as separate from mainstream architecture and has been accorded the status of worthy but dull design David Lloyd Jones seeks to correct this judgement as he showcases 44 contemporary projects

Learning from Experiences with Energy Efficient HVAC Systems in Office Buildings Lennart Jagemar, 1995 *A Deeper Shade of Green* Johann Bernhardt, 2008 It is estimated that the building sector uses roughly half of all the energy generated in this country a very high proportion of materials and creates huge volumes of landfill wastes This means that to make a difference we need to look at how we build how we can reduce energy use and costs how we future proof our buildings and minimise their carbon footprint This book is the first comprehensive step in providing assistance for all of us to make a difference to our environment and to lead more comfortable cost efficient and sustainable lives within the buildings we inhabit
