The Biopsychosocial Approach Richard M. Frankel,Timothy E. Quill,Susan H. McDaniel,2003 For thousands of years Western culture has dichotomized science and art empiricism and subjective experience and biology and psychology In contrast with the prevailing view in philosophy neuroscience and literary criticism George Engel an internist and practicing physician published a paper in the journal Science in 1977 entitled The Need for a New Medical Model A Challenge for Biomedicine In the context of clinical medicine Engel made the deceptively simple observation that actions at the biological psychological and social level are dynamically interrelated and that these relationships affect both the process and outcomes of care The biopsychosocial perspective involves an appreciation that disease and illness do not manifest themselves only in terms of pathophysiology but also may simultaneously affect many different levels of functioning from cellular to organ system to person to family to society This model provides a broader understanding of disease processes as encompassing multiple levels of functioning including the effect of the physician patient relationship This book which contains Engel s seminal article looks at the continuing relevance of his work and the biopsychosocial model as it is applied to clinical practice research and education and administration Contributors include Thomas Inui Richard Frankel Timothy Quill Susan McDaniel Ronald Epstein Peter LeRoux Diane Morse Anthony Suchman Geoffrey Williams Frank deGruy Robert Ader Thomas Campbell Edward Deci Moira Stewart Elaine

Gulf War and Health Institute of

Medicine, Board on the Health of Select Populations, Committee on Gulf War and Health: Treatment for Chronic Multisymptom Illness, 2013-04-04 Chronic multisymptom illness CMI is a serious condition that imposes an enormous burden of suffering on our nation's veterans. Veterans who have CMI often have physical symptoms such as fatigue, joint and muscle pain, and gastrointestinal symptoms, and cognitive symptoms such as memory difficulties. For the purposes of this report, the committee defined CMI as the presence of a spectrum of chronic symptoms experienced for 6 months or longer in at least two of six categories: fatigue, mood, and cognition; musculoskeletal; gastrointestinal; respiratory; and neurologic that may overlap with but are not fully captured by known syndromes such as CFS, fibromyalgia, and IBS, or other diagnoses. Despite considerable efforts by researchers in the United States and elsewhere, there is no consensus among physicians, researchers, and others as to the cause of CMI. There is a growing belief that no specific causal factor or agent will be identified. Many thousands of Gulf War veterans¹ who have CMI live with sometimes debilitating symptoms and seek an effective way to manage their symptoms. Estimates of the numbers of 1991 Gulf War veterans who have CMI range from 175,000 to 250,000, about 25-35% of the 1991 Gulf War veteran population, and there is evidence that CMI in 1991 Gulf War veterans may not resolve over time. Preliminary data suggest that CMI is occurring in veterans of the Iraq and Afghanistan wars as well. In addition to summarizing the available scientific and medical literature regarding the best treatments for chronic multisymptom illness among Gulf War veterans, Gulf War and Health: Volume 9, Treatment for Chronic Multisymptom Illness, recommends how best to disseminate this information throughout the VA to improve the care and benefits provided to veterans; recommends additional scientific studies and research initiatives to resolve areas of continuing scientific uncertainty; and recommends such legislative or administrative action as the IOM deems appropriate in light of the results of its review.
