Digital Property Wendy W. Fok, Antoine Picon, 2017-03-09 Even more than authorship ownership is challenged by the rise of digital and computational methods of design and production These challenges are simultaneously legal ethical and economic How are new methods of fabrication and manufacture going to irreversibly change not only ways of working but also designers ethics and their stance on

ownership In his 2013 second term State of the Union address President Obama stated that 3D printing has the potential to revolutionize the way we make almost everything Nowhere will the impact of 3D printing be felt greater than in the architectural and design communities When anyone can print out an object or structure from a digital file will designers still exert the same creative rights or will they need to develop new practice and payment models As architecture becomes more collaborative with open source processes will the emphasis on signature as the basis of ownership remain relevant How will wider teams working globally be accredited and compensated This issue of AD explores this subject it features the work of designers who are developing wholly new approaches to practice by exploring means of commercialising process based products rather than objects Contributors Phil Bernstein Mark Garcia Antoine Picon Carlo Ratti and David Ruy Featured architects Francis Bitonti Marjan Colletti Wendy W Fok Panagiotis Michalatos Jose Sanchez Thibault Schwartz Aaron Sprecher Feng Xu and Philip Yuan The Business of Research Deborah Saunt, Tom Greenall, Roberta Marcaccio, 2019-04-30 Architectural research is being redefined in practice Whereas once the value of a piece of research was solely measured by the number of citations it received by fellow academics shifting funding models and new societal concerns are forcing academia to question its structure and this mode of evaluation At the same time a wave of practitioners and new types of institutions such as RMIT in Melbourne and the London School of Architecture LSA have been recasting architectural education and theoretical speculation within practice turning the traditional architectural studio into a learning environment that adopts and adapts academic models and starts to use architectural research as a potential source of business intelligence as a means for self generating future commissions and speculative opportunities that sometimes even shift the terrain of practice This new focus on research in practice is indicative of a profession redefining its relevance and scope This is destabilising the traditional roles of academia and practice by questioning their deep rooted separation and demanding a new definition of the term research with one that is relevant to both parties This issue features contributions from architectural thinkers researchers and a number of practitioners who are recasting academic speculation within their own studios This not only redefines what is meant by research and what forms it takes but also how it creates value for them their clients for the discipline as a whole and for the ultimate users of their designs This helps us to understand how research might be deemed valuable beyond a purely academic context Moreover it raises significant questions in terms of opportunities and risks that arise when research is recast into the less regimented realm of practice Contributors Daniel Davis Lionel Devlieger David Green Harriet Harris Rory Hyde Lara Kinneir James Soane Ziona Strelitz Leon van Schaik John Zhang Featured architects Assemble DSDHA Foster Partners Iredale Pedersen Hook OMA Public Practice and Superflux

Envisioning a positive future through design 2050 *Designing Our Tomorrow* describes the ways in which architecture and design can engage with the key drivers of change and provide affirmative aspirations for a not so distant future With a focal date of 2050 this issue of AD asks when and how the design community can should and must be taking action The discussion centres on shifts in the urban environment and an established way of life in a world of depleted natural resources and climate change Featuring interviews with Paola Antonelli of MoMA and Tim Brown of IDEO it includes contributions from thought leaders such as Janine Benyus Thomas Fisher Daniel Kraft Alex McDowell Franz Oswald and Mark Watts High profile designers like FutureCitiesLab SHoP and UrbanThinkTank are featured as examples of forward thinking and innovation in the field highlighting the need for and possibility of a shift in the global perspective The discussion includes the challenges we face in creating a positive tomorrow and the solutions that architecture and design can bring to the table Despite the proliferation of global crises possibly threatening human survival our current moment provides the opportunity to write a new positive story about our future 2050 *Designing Our Tomorrow* describes how the design community can contribute to that vision by asserting positive aspirations for the worlds we create ourselves See how architects and designers inspire global positive change Consider architecture s role in shaping cultural outlook Learn the key drivers of change for the built environment Explore the perspectives of leading experts and designers Architects and planners over the centuries have put a stamp upon the planet through the physical manifestations of their belief structures Today s design community faces a rising wealth gap climate change shifting paradigms of nationalism and myriad other challenges 2050 *Designing Our Tomorrow*

phrases global issues as a design problem and describes how architects and designers can rise to the challenge of creating a more positive future *Mass-Customised Cities* Tom Verebes, 2015-12-21 What happens when computational design and fabrication technologies ramp up to the urban scale Though these innovative production processes are currently now largely limited to small scale design projects what will happen when they are applied to the vast scale of the 21st century world city Could new technologies enable an important shift away from mass production to increasingly bespoke and custom designed systems The introduction of standardisation and mass production processes in the 20th century saw the industrial city take on a repetitious and homogeneous quality through the duplication of component parts Today non standard bespoke systems hold out the promise of realising a distinctive urbanism characterized by the differentiation of serial production and the variation of simple parts that should lead to a more complex and compelling whole Given the current pace and rate of urbanisation in Asia the mass customization of the city is set to have imminent and far reaching practical consequences for the rest of the developing and developed world The Disruptors Dennis R. Sheldon, 2020-06-08 Technology driven disruption and entrepreneurial response have become profound drivers of change in modern culture Wholly new organisations have rapidly emerged in many fields including retail print media and transportation often dramatically altering both the products and processes that define these industries Architecture has until now been minimally impacted by this technologically driven upheaval But there are many signs that this period of tranquillity is ending Startups are proliferating targeting diverse innovations from environmental performance to large scale 3D printing Traditional architecture and engineering firms are creating incubators and spin offs to capitalise on their innovations Large and innovative organisations from outside the professions are becoming interested in the built environment as the next platform for technological and economic disruption These new directions for the discipline will potentially create radically new types of practice new building typologies and new ways for both design professionals and societies to engage with the built environment It is crucial that architectural discourse addresses these possibilities and begins to embrace technology driven entrepreneurship as a central theme for the future of architectural practice Contributors Sandeep Ahuja Ben van Berkel Phil Bernstein Helen Castle James Cramer and Scott Simpson Craig Curtis David Fano and Daniel Davis Greg Lynn Jessica Rosenkrantz and Jesse Louis Rosenberg Brad Samuels Marc Simmons Jared Della Valle and Philip F Yuan and Chao Yan Featured architects Archi Union Ayre Chamberlain Gaunt Bryden Wood Gehry Partners Front Greg Lynn FORM Millar Howard Workshop Nervous System SITU and UNStudio Beauty Matters Yael Reisner, 2019-11-18 Beauty in architecture matters again This issue of AD posits that after 80 years of aggressive suppression of engagement with aesthetics the temporarily dormant preoccupation with beauty is back This is evidenced by a current cultural shift from the supposedly objective to an emerging trust in the subjective a renewed fascination for aesthetics supported by new knowledge emanating simultaneously from disparate disciplines Digital design continues to influence architectural discourse not only due to changes in manufacturing

3D-Printed Body Architecture Neil Leach, Behnaz Farahi, 2018-02-01 Some architects dream of 3D printing houses Some even fantasise about 3D printing entire cities But what is the real potential of 3D printing for architects This issue focuses on another strand of 3D printing practice emerging among architects operating at a much smaller scale that is potentially more significant Several architects have been working with the fashion industry to produce some exquisitely designed 3D printed wearables Other architects have been 3D printing food jewellery and other items at the scale of the human body But what is the significance of this work And how do these 3D printed body scale items relate to the discipline of architecture Are they merely a distraction from the real business of the

architect Or do they point towards a new form of proto architecture like furniture espresso makers and pavilions before them that tests out architectural ideas and explores tectonic properties at a smaller scale Or does this work constitute an entirely new arena of design In other words is 3D printing at the human scale to be seen as a new genre of body architecture This issue contains some of the most exciting work in this field today and seeks to chart and analyse its significance Contributors include Paola Antonelli MoMA Francis Bitonti Niccolo Casas Behnaz Farahi Madeline Gannon Eric Goldemberg MONAD Studio Kyle von Hasseln 3D Systems Culinary Lab Rem D Koolhaas Julia Krner Neil Leach Steven Ma Xuberance Neri Oxman MIT Media Lab Ronald Rael and Virginia San Fratello Gilles Retsin Jessica Rosenkrantz Nervous System and Patrik Schumacher Zaha Hadid Architects
