Signs for Developing Reading Emil Holmer, 2016-05-23 Reading development is supported by strong language skills not least in deaf and hard of hearing DHH children. The work in the present thesis investigates reading development in DHH children who use sign language attend Regional Special Needs Schools RSNS in Sweden and are learning to read. The primary aim of the present work was to investigate whether the reading skills of these children can be improved via computerized sign language based literacy training. Another aim was to investigate concurrent and longitudinal associations between skills in reading sign language and cognition in this population. The results suggest that sign language based literacy training may support development of word reading. In addition awareness and manipulation of the sub lexical structure of sign language seem to assist word reading and imitation of familiar signs i.e. vocabulary may be associated with developing reading comprehension. The associations revealed between sign language skills and reading development support the notion that sign language skills provide a foundation for emerging reading skills in DHH signing children. In addition the results also suggest that working memory and Theory of Mind ToM are related to reading comprehension in this population. Furthermore the results indicate that sign language experience enhances the establishment of representations of manual gestures and that progression in ToM seems to be typical although delayed in RSNS pupils. Working memory has a central role in integrating environmental stimuli and language mediated representations and thereby provides a platform for cross modal language processing and multimodal language development. En god språklig förmåga bidrar till god läsutveckling inte minst hos döv- och hörselskadade DHH barn. Studierna som ingår i avhandlingen undersöker läsutveckling hos DHH elever som gör teckenspråkiga specialskolor och som hellre på att lära sig att läsa. Arbetets huvudsakliga syfte var att undersöka om deras läsförmåga kan förbättras via datoriserad teckenspråksbaserad lästräning. Ett annat syfte var att undersöka samtida och longitudinella samband mellan läsförmåga, teckenspråk och kognition i samma population. Resultaten indikerar att teckenspråksbaserad lästräning kan bidra till ordläsningsutveckling. Vidare pekar resultaten på att medvetenhet om och manipulation av teckenspråkets sublexikala struktur stöttar läsförmågan och dessutom att imitation av kända tecken i.e. vokabulär var associerat med utvecklingen av barnens läsförståelse. Dessa fynd visar att teckenspråkskunskaper kan utgöra en grund för läsutveckling hos teckenspråkiga DHH elever. Resultaten indikerade även att arbetsminne och Theory of Mind ToM relaterade till läsförståelse i denna grupp. Vid sidan av resultaten rörande läsutveckling framkom också att teckenspråksfärdighet leder till starkare etablering av representationer av manuella gester och vidare att barnens mentaliseringsförmåga Theory of Mind uppvisade en förväntad progression om närvarande. En implikation av detta är att insatser som stöttar utveckling av teckenbaserade representationer och deras användning vid bearbetning av skrivet språk kan främja läsutveckling hos teckenspråkiga DHH elever. Arbetsminne försls genom sin roll i integration mellan inkommande stimuli och språkmedierade representationer fungera som en plattform för modalitetsverskridande språkbearbetning och multimodal språkutveckling. **A Comparison of**
