consistent with earlier modes of broadcasting Various iterations of internet radio from streaming audio to podcasting are all new radio practices rather than each being a separate new medium radio is any sound media that is purposefully crafted to be heard by an audience Rather than a particular set of technologies or textual conventions web based broadcasting combines unique practices and features and ideas from radio history In addition there exists a distinctive conversationality and reflexivity to radio talk including a propensity for personal stories and emotional disclosure that suits networked digital media culture What media convergence has done is extend and intensify radio's logics of connectivity and sharing sonically mediated personal expression intended for public consideration abounds in online media networks Sound Streams marks a significant contribution to digital media and internet studies Its mix of cultural history industry research and genre and formal analysis especially of contemporary audio storytelling will appeal to media scholars radio and podcast practitioners audio journalism students and dedicated podcast fans Great Ideas Student's Book Leo Jones,Victoria
