features of IBM Informix 11 70 Informix provides solutions for making data highly available in the MACH11 cluster The components of the MACH11 cluster include High Availability Data Replication HDR Shared Disk Secondary SDS and Remote Secondary Standby RSS servers Enterprise Replication ER provides a means of selectively replicating data between systems in near real time The Informix Flexible Grid eliminates the administrative complexity of ER Flexible Grid provides the ability to automatically create database objects such as tables indexes and stored procedures on all nodes within the grid as a single operation These enhanced Enterprise Replication features provide solutions for those customers requiring reliable and quick dissemination of data across a global organization There is also enhanced capability for customers requiring High Availability Disaster Recovery in the form of the ability to resend primary server indexes to secondary servers without requiring a rebuild of the index on the primary server Capabilities such as these enable faster easier and more reliable distribution and high availability of data resulting in improved access and use throughout the enterprise

Flexible Biosensors and Intelligent Medical Devices in Health and Disease Zhiwei Luo,Xiaoguang Zhou,Jian Yang,Jie Deng,2022-06-29 **Architecture and Methods for Flexible Content Management in Peer-to-Peer Systems** Udo Bartlang,2010-04-11

At times when the IT manager s best friend is systems consolidation which is a euphemism for centralisation it may come somewhat as a surprise for you that this book investigates decentralisation in the context of content management systems It may seem quite obvious that content will and should be managed by the party who creates and owns the content and hence should be held in a somewhat centralised and managed location However over the past few years we have been witnesses of some important trends and developments which call for novel ways of thinking about content management and maybe even broader about computer systems in general First ongoing business globalization creates natural distribution of information at a corporate level as well as decentralization of control over business resources and business processes Changing alliances with partners require exible architectures for content management that canadapttochangingconstellations roles andaccessrights Second theneedforoutsourcing and resource e ciency has brought about concepts of virtualization recently culminating in the cloud computing buzzword Virtualization of content management services requires tremely scalable and exible underlying information and communication architectures These kinds of solutions are theoretically and practically impossible to implement based on c tralised client server architectures Third we are currently experiencing a dramatic shift in the roles of consumers in the Internet The times have gone when quality content was only delivered by publishers and news agencies Wikis and other Web 2 0 tools empower consumers to produce and publish their personal content
