Mobile Tech Report 2014 John R. Roberts, 2014-01-10 If you read technology news you'll notice it's not just a story of amazing new product introductions or even that plus copycat product introductions. All the usual aspects of business are there: fierce competition, new contenders, old survivors, great ideas, but business failures, mediocre ideas that somehow seem to succeed and prosper. As a reporter, commentator, and blogger on mobile technology, I've collected what happened in the industry in 2013 and make predictions on what will and won't happen in 2014. You can read what did happen in the mobile technology in 2013. Often I deliver a comment with the news item and usually there is a link to the web page of the original announcement. This way you can dive into any detail level you desire, read my news feed for the overview, or follow the related web link to the longer article. History is moving so fast now that it is all recorded electronically, but I'm surprised no one else has collected it and presented it for consideration. Here is 2013 from the mobile technology industry for your consideration along with my own observations and opinions about where things are headed. It's often overlooked that the technology industry is an industry. By that I mean its main concerns are profit and growth. As consumers, we love the new products and unique abilities we are gaining from technology, but it is a business akin to any other, trying to seduce us to pry money out of our wallets. So I cover the horse race aspect of the business: who's up, who's down. Is that changing? Is that likely to change? The longer implications of what the technology industry is doing are vast and social. We are moving to an always-on, always-connected society where we can communicate with someone instantly and find an answer to any question quickly. The entire database of human knowledge is now available in the palm of your hand whenever you desire it. Everything is there: the good, the bad, right and wrong, hate and love, music and noise. We are obsessed with technology, not in and of itself, but as a means to an end. Technology is the means to satisfy our curiosity or even our desire for self-expression. We are taking photos, machine gun style, with our smartphones and choose the few to share. As humans, we are gathering ever more data about ourselves and sharing more about ourselves than we probably thought possible. Bill Gates was once asked why the computer industry had generated so much improvement in its products over a relatively few years. He gave some boring answer about Moore's Law, but the real answer is that computers are in their teenage years. They are growing and growing. They will not always do so. So too the technology industry is in a state of rapid change. I see the shift to smaller devices as a new paradigm, smashing some businesses and growing others into giants. Their stories are here in the news. In short, here are predictions for what won't and will happen in 2014 for the mobile technology

In this compelling examination of the intersection of smart technology and the law, Joshua A. T. Fairfield explains the crisis of digital ownership: how and why we no longer control our smartphones or software-enabled devices, which are effectively owned by software and content companies. In two years, we will not own our smart televisions, which will also be used by advertisers to listen in to our living rooms. In the coming decade, if we do not take back our ownership rights, the same will be said of our self-driving cars and software-enabled homes. We risk becoming digital peasants, owned by software and advertising companies, not to mention overreaching governments. *Owned* should be read by anyone wanting to know more about the loss of our property rights, the implications for our privacy rights, and how we can regain control of both.

Your Android web app development skills will then proceed in another direction as you discover the power of HTML5 in two game apps: Scavenger Hunt, which introduces you to the HTML5 GPS location API, and Spies, a location-based application that shows you how to use CSS3, Ajax, and HTML5 within multi-player environments. You'll also create an Android web application which checks the arrival time of buses and light rails through the use of Portland Oregon's open TriMet data API. This app is a great template for other apps you may want to build in the future and showcases the important techniques for incorporating cloud-based apps into web games. After reading *Beginning Android Web Apps Development* you will have built real apps and developed along the way the skills you'll need to create highly interactive professional web applications and your journey will be engaging and enjoyable.

Pro Android Apps Performance Optimization Hervé Guéhot, 2012-02-12 Today's Android apps developers are often running into the need to refine, improve, and optimize their apps' performances. As more complex apps can be created, it is even more important for developers to deal with this critical issue. Android allows developers to write apps using Java, C, or a combination of both with the Android SDK and the Android NDK. *Pro Android Apps Performance Optimization* reveals how to fine-tune your Android apps, making them more stable and faster. In this book, you'll learn the following: How to optimize your Java code with the SDK, but also how to write and optimize native code using advanced features of the Android NDK, such as using ARM single instruction multiple data (SIMD) instructions in C or assembly; How to use multithreading in your application; how to make best use of memory; and how to maximize battery life; How to use some OpenGL optimizations; and to Renderscript, a new feature in Android 3.0 Honeycomb and expanded in Android 4.0 Ice Cream Sandwich. After reading and using this book, you'll be a better coder, and your apps will be better coded. Better performing apps mean better reviews and eventually more money for you as the app developer or your indie shop.
