New Kind of Machine Learning-Cellular Automata Model Parimal Pal Chaudhuri, Adip Dutta, Somshubhro Pal Choudhury, Dipanwita Roy Chowdhury, Raju Hazari, 2025-04-25 This book introduces the CAML model a novel integration of Cellular Automata CA and Machine Learning ML designed to deliver efficient computation with minimal training data and low computing resources CAML operates through two key perspectives one where CA is enhanced by ML to handle complex non linear evolution and another where CA strengthens ML by leveraging linear CA evolution to process linear functions effectively The book focuses on real world applications of CA such as in Computational Biology where CAML models protein chains to predict mutations linked to human diseases using

Carefully designed CA rule sequences for each amino acid. Another significant application is in multi language Sentiment Analysis where the model analyzes text in five languages Hindi Arabic English Greek and Georgian without relying on pre trained language models. CAML uses CA rules for Unicode character modeling offering a transparent interpretable prediction algorithm. Overall CAML aims to drive industrial and societal applications of CA with an emphasis on transparent results and efficient hardware design through CA's regular modular and scalable structure. *AI Robotics* Vinod Kumar

Khanna, 2025-10-09 Artificial intelligence AI robots can learn from their experiences make decisions in real time understand natural language and human gestures and utilize computer vision to perceive and comprehend their environments. Beginning with the rudimentary concepts of AI, *AI Robotics: Ethics, Algorithms and Technology of Artificial Intelligence Powered Robots* explores the intersection of robotics and physics and emphasizes the need for strict adherence to ethical principles in relation to overall progress and the development of humankind. Chapters on robots capable of talking, listening and visual perception similar to human beings are followed by discussions of those that display emotional intelligence. This book also discusses task and motion planning, a set of methods that help robot hardware achieve high level goals by breaking down tasks into smaller more manageable steps. Lastly, the text describes autonomous robots that can make independent decisions and execute tasks on their own utilizing sensors and AI enabled software programmed with predefined guidelines and data. Examples of autonomous robots are presented in a chapter on robot swarms that operate in a decentralized self organizing manner through local communication to manage disaster relief search and rescue operations, warehouse logistics, agricultural practices and environmental exploration. Offering an up to date expansive and comprehensive treatment of the vast interdisciplinary field of AI robotics, this book will be an invaluable resource for postgraduate and doctorate students as well as academic researchers and professional engineers working on AI enabled robotics. The electronic version of this book was funded to publish Open Access through Taylor Francis Pledge to Open, a collaborative funding open access books initiative. The full list of pledging institutions can be found on the Taylor Francis Pledge to Open webpage. **Key Features:** Explores the research frontiers and advancements leveraged by integrating AI with robotics. Highlights the unique challenges faced in robot vision and speech recognition vis vis computer vision and standard speech processing. Provides a state of the art overview of emotional recognition, task and motion planning and coordinated functioning of robots in multi robot systems.

Artificial Intelligence for Digitising Industry Applications Ovidiu Vermesan, 2022-09-01 This book provides in depth insights into use cases implementing artificial intelligence AI applications at the edge. It covers new ideas, concepts, research and innovation to enable the development and deployment of AI, the industrial internet of things IIoT, edge computing and digital twin technologies in industrial environments. The work is based on the research results and activities of the AI4DI project including an overview of industrial use cases, research, technological innovation, validation and deployment. This book's sections build on the research, development and innovative ideas elaborated for applications in five industries: automotive,

semiconductor industrial machinery food and beverage and transportation The articles included under each of these five industrial sectors discuss AI based methods techniques models algorithms and supporting technologies such as IIoT edge computing digital twins collaborative robots silicon born AI circuit concepts neuromorphic architectures and augmented intelligence that are anticipating the development of Industry 5.0 Automotive applications cover use cases addressing AI based solutions for inbound logistics and assembly process optimisation autonomous reconfigurable battery systems virtual AI training platforms for robot learning autonomous mobile robotic agents and predictive maintenance for machines on the level of a digital twin AI based technologies and applications in the semiconductor manufacturing industry address use cases related to AI based failure modes and effects analysis assistants neural networks for predicting critical 3D dimensions in MEMS inertial sensors machine vision systems developed in the wafer inspection production line semiconductor wafer fault classifications automatic inspection of scanning electron microscope cross section images for technology verification anomaly detection on wire bond process trace data and optical inspection The use cases presented for machinery and industrial equipment industry applications cover topics related to wood machinery with the perception of the surrounding environment and intelligent robot applications AI IIoT and robotics solutions are highlighted for the food and beverage industry presenting use cases addressing novel AI based environmental monitoring autonomous environment aware quality control systems for Champagne production and production process optimisation and predictive maintenance for soybeans manufacturing For the transportation sector the use cases presented cover the mobility as a service development of AI based fleet management for supporting multimodal transport This book highlights the significant technological challenges that AI application developments in industrial sectors are facing presenting several research challenges and open issues that should guide future development for evolution towards an environment friendly Industry 5.0 The challenges presented for AI based applications in industrial environments include issues related to complexity multidisciplinary and heterogeneity convergence of AI with other technologies energy consumption and efficiency knowledge acquisition reasoning with limited data fusion of heterogeneous data availability of reliable data sets verification validation and testing for decision making processes **AI**
