Oxygen Transport to Tissue XXXI Eiji Takahashi, Duane F. Bruley, 2010-03-10 The International Society on Oxygen Transport to Tissue ISOTT www.isott.info is an interdisciplinary society comprising about 250 members worldwide Its purpose is to further the understanding of all aspects of the processes involved in the transport of oxygen from the air to its ultimate consumption in the cells of the various organs of the body The annual meeting brings together scientists engineers clinicians and mathematicians in a unique international forum for the exchange of information and knowledge the updating of participants on latest developments and techniques and the discussion of controversial issues within the field of oxygen transport to tissue Founded in 1973 the society has been the leading platform for the presentation of many of the technological and conceptual developments within the field both at the meetings themselves and in the proceedings of the society These have been published first by Plenum Publishing 1973 then by Kluwer Academic Plenum Publishers and presently by Springer Publishing all in the Advances In Experimental Medicine and Biology Series The 36th Annual ISOTT conference was held in Sapporo Japan during August 3-7 2008 It was the second occasion that the ISOTT meeting was held in Japan the first one was held in the same place in 1987 organized by Professor Masaji Mochizuki

Copper Transport and Its Disorders Arturo Leone, Julian F.B. Mercer, 2012-12-06 This book is a compilation of presentations at the first meeting devoted to the molecular and cellular biology of copper transport When we first considered the possible program for the meeting we felt that a forum to integrate the recent advances in molecular understanding of copper transport with the older knowledge of copper metabolism was needed In addition we wished to have a strong emphasis on the diseases of copper including the genetic diseases Menkes and Wilson and other possible health aspects of this metal seen from a molecular

perspective Overall we were very happy with the success of the meeting and most participants were very enthusiastic Unfortunately we were not able to obtain manuscripts from every contributor but the selection in this book covers most of the topics discussed The history of biological research into copper dates from the latter half of the last century when the presence of copper as a component of living systems was first noted but it was not until the 1920s that the essential role of copper was first recognized I S McHargue found that plants and animals needed copper for optimal growth and health and proposed that copper was needed for life McHargue 1925 Other groups soon confirmed these observations in plants In animals the requirement of copper for hematopoiesis was discovered in 1928 Hart et al

Mechanisms of Work Production and Work Absorption in Muscle Haruo Sugi, Gerald H. Pollack, 2012-12-06 In contrast to common practice we have always tried to include as many discussions held at the meeting in our proceedings as possible so as to enable readers to properly evaluate each paper presented as well as to learn of future prospects in this field of research Although the policy of including discussions occasions a long publication delay we believe that it is worth repeating in our future publication as we have met a number of young investigators fascinated by the discussions in our proceedings In the concluding remarks in this volume Dr Hugh E Huxley a principal architect of the sliding filament mechanism of muscle contraction states that the molecular mechanism of myofilament sliding remains mysterious to all of us We hope that this volume will stimulate muscle investigators to design and perform novel experiments to clarify the mysteries in muscle contraction Haruo Sugi and Gerald H Pollack excerpted from the Preface
