In the classroom too, they typically misjudge how well they understand new concepts, overestimate the accuracy of their own examples and underestimate how much they forget. This book reveals how a metacognitive approach to teaching can help overcome these challenges and support pupils in their learning. This approach can help them in developing the skills to become successful self-regulated learners. Drawing on key research from cognitive science, this book explores how metacognition works in practice and argues that it is a complex skill best developed over months and years at school. It provides a blueprint for how learning to learn alongside quick wins that teachers can implement straight away. Chapters cover: The metacognitive processes that underpin effective learning; Myths about learning and how pupils' memory really works; Quick to apply classroom strategies for before, during and after tasks; Different independent study techniques and how to embed them; Developing a culture of metacognition. Full of practical strategies and case studies, this is essential reading for all teachers who want to help their pupils become successful learners in school as well as independent learners for their exam revision and beyond.
