1. Introduction (Weijers)

The Oxford Handbook of Happiness is the most comprehensive single volume on the subject of happiness. This long-anticipated landmark collection, along with the similarly ambitious *Encyclopedia of Quality of Life Research* (A. Michalos, ed. 2013, Springer) shows happiness scholarship coming of age and spreading outward into new themes and disciplines as well as forward into policy and practice. The book takes a broad definition of happiness and its contents span positive psychology and interdisciplinary (but psychology-focused) happiness studies. On the whole, the handbook is a remarkable achievement in that it covers most of the basic contemporary knowledge about happiness as well as giving glimpses of more advanced and specific findings. It is remarkable to attain this level of coverage because about 10,000 publications on happiness are released each year (Diener & Scollon, 2013). This coverage makes the book the perfect resource for any student intent on studying happiness and any experienced researcher who wants to enter the field of happiness studies. Established happiness researchers could also benefit from owning this book because the rapid expansion of research on happiness has made it increasingly difficult for them to keep abreast of the recent research trends and findings in the sub-fields of happiness research that they do not specialize in. Furthermore, readers can use the book as a starting point for their happiness research with a high level of confidence because all the authors are recognized authorities in their respective areas and (perhaps with one or two exceptions) have provided excellent chapters that justify their status as ‘authorities’.

Some of the reviewers were particularly impressed with the extent to which the book transcends the traditional limitations of both positive psychology and moral philosophy to include many contributions emphasizing social, ecological, political, and policy dimensions of the study of happiness. Perhaps inevitably though, other reviewers would have appreciated additional sections or chapters. For example, very little attention is given to biological aspects of happiness, such as health, evolutionary considerations, and the neuroscience of happiness. The same might also be said for economic, and possibly ecological, research related to happiness. But, given the book is already over 1,000 pages long, it seems unreasonable to bemoan a lack of depth on possible topics too loudly.

On the whole, the editors should be commended for their choices of contributors and topics, and for their ability to keep the chapters to a length that nearly always manages to maintain a fine balance between depth and readability. Unfortunately, the book is priced at

Frey, 2018-02-26 This book focuses on what makes people happy. The author explains methods for measuring subjective life satisfaction and well-being by discussing economic and sociodemographic factors as well as the psychological, cultural, and political dimensions of personal happiness. Does higher income increase happiness? Are people in rich countries such as the United States, the United Kingdom, and Scandinavian countries happier than those living elsewhere? Does losing one's job make one unhappy? What is the role of genetic endowments inherited from our parents? How important are physical and emotional health to subjective life satisfaction? Do older people tend to be happier or younger people? Are close social relationships necessary for happiness? Do political conditions such as respect for human rights, democracy, and autonomy play a part? How can governments contribute to the population's happiness? This book answers these questions on the basis of extensive interdisciplinary research reflecting the current state of knowledge. The book will appeal to anyone interested in learning more about the various dimensions of personal well-being beyond the happiness-prosperity connection as well as to policymakers looking for guidance on how to improve happiness in societies. Close Relationships and Happiness across Cultures

Melikşah Demir, Nebi Sümer, 2018-08-10 This volume focuses explicitly on close relationships as a reliable source for individual happiness and well-being across cultures. The work in this volume addresses theoretical issues and presents new cross-cultural data in the study of close relationships and happiness. Experts from different parts of the world provide in-depth authoritative reviews and new findings on the relationship between various types of close bonds, e.g., intimate marital friendship, grandparent and happiness in a variety of cultures. An ideal resource for researchers and students of relationship science and positive psychology, this rich, clear, and up-to-date book serves as an important reference for academicians in related fields of psychology such as cross-cultural, social, and developmental. HAPPINESS AND RELIGIOSITY IN YOUNG INDONESIAN MUSLIMS

Dr. Yufi Adriani, 2021-05-06 This book is only the first step in exploring the relationship between happiness and religion, especially in Young Indonesian Muslims. The content of this book is based on research that has been conducted during doctoral study at Deakin University, Australia, and the study aimed to elucidate the relationship between happiness and religiosity as experienced and understood by a group of 12 young people studying at a large public Islamic university in Jakarta. Interviews with the participants about their understanding of religion and conceptualization of happiness were analyzed using Giorgi's descriptive phenomenological approach to elucidate the meaning of happiness and religion in young Muslims. The findings show that there were differences in how the participants described their happiness; that a range of factors affected their happiness and influenced their ability to cope with stress. While many of the participants had some of the same ideas about religion and its relationship to happiness that are common in Indonesia, in general, religion was not a significant factor in their happiness, nor was it the direct support for them in coping with stress. In this study, it suggests that Indonesia's widespread assumption that religion is the most significant source of resilience and coping may not apply to younger individuals who typically have many more choices than may have been available in the past. Describing and

Happiness Across Cultures Helaine Selin,Gareth Davey,2024-11-25

This second edition of Happiness Across Cultures contains 8 brand new chapters on previously uncovered topics such as Covid19 refugees and violence Different

cultures experience happiness differently Traditionally the West is considered materialistic and happiness is said to come from achievement and acquisition The East is said to be more people oriented where happiness is a result of deep personal interactions Thus poor people can be happier in the East than the West because they are not so concerned with possession and more with society This new edition considers happiness and quality of life in non Western countries and cultures Its coverage is now more diverse and spans the breadth of the non Western world revealing unique perspectives of happiness and life quality embedded in rich cultural traditions and histories
