Metaphysics Dean W. Zimmerman, 2006 **Mereology and the Sciences** Claudio Calosi, Pierluigi Graziani, 2014-06-02 This volume is the first systematic and thorough attempt to investigate the relation and the possible applications of mereology to contemporary science It gathers contributions from leading scholars in the field and covers a wide range of scientific theories and practices such as physics mathematics chemistry biology computer science and engineering Throughout the volume a variety of foundational issues are investigated both from the formal and the empirical point of view The first section looks at the topic as it applies to physics The section addresses questions of persistence and composition within quantum and relativistic physics and concludes by scrutinizing the possibility to capture continuity of motion as described by our best physical theories within gunky space times The second part tackles mathematics and shows how to provide a foundation for point free geometry of space switching to fuzzy logic The relation between mereological sums and set theoretic suprema is investigated and issues about different mereological perspectives such as classical and natural Mereology are thoroughly discussed The third section in the volume looks at natural science Several questions from biology medicine and chemistry are investigated From the perspective of biology there is an attempt to provide axioms for inferring statements about part hood between two biological entities from statements about their spatial relation From the perspective of chemistry it is argued that classical mereological frameworks are not adequate to capture the practices of chemistry in that they consider neither temporal nor modal parameters The final part introduces computer science and engineering A new formal mereological framework in which an indeterminate relation of part hood is taken as a primitive notion is constructed and then applied to a wide variety of disciplines from robotics to knowledge engineering A formal framework for discrete mereotopology and its

applications is developed and finally the importance of mereology for the relatively new science of domain engineering is also discussed

Mereology and Location Shieva Kleinschmidt, 2014 A team of leading philosophers presents original work on theories of parthood and of location Topics covered include how we ought to axiomatise our mereology whether we can reduce mereological relations to identity or to locative relations whether Mereological Essentialism is true different ways in which entities persist through space time spacetime and even hypertime conflicting intuitions we have about space and what mereology and propositions can tell us about one another The breadth and accessibility of the papers make this volume an excellent introduction for those not yet working on these topics Further the papers contain important contributions to these central areas of metaphysics and thus are essential reading for anyone working in the field

The Oxford Handbook of Philosophy of Time Craig Callender, 2011-04-07 As the study of time has flourished in the physical and human sciences the philosophy of time has come into its own as a lively and diverse area of academic research Philosophers investigate not just the metaphysics of time and our experience and representation of time but the role of time in ethics and action and philosophical issues in the sciences of time especially with regard to quantum mechanics and relativity theory This Handbook presents twenty three specially written essays by leading figures in their fields it is the first comprehensive collaborative study of the philosophy of time and will set the agenda for future work

Epistemology of Modality and Philosophical Methodology Anand Vaidya, Duško Prelević, 2023-03-21 This book collects original essays on the epistemology of modality and related issues in modal metaphysics and philosophical methodology The contributors utilize both the newer metaphysics first and the more traditional epistemology first approaches to these issues The chapters on modal epistemology mostly focus on the problem of how we can gain knowledge of possibilities which have never been actualized or necessities which are not provable either by logico mathematical reasoning or by linguistic competence alone These issues are closely related to some of the central issues in philosophical methodology notably to what extent is the armchair methodology of philosophy a reliable guide for the formation of beliefs about what is possible and necessary This question also relates to the nature of thought experiments that are extensively used in science and philosophy

Epistemology of Modality and Philosophical Methodology will be of interest to researchers and advanced students working on the epistemology and metaphysics of modality as well as those whose work is concerned with philosophical methodology more generally

Objects and Properties , 2025-11-27 This edited volume features a range of essays from world leading philosophers discussing the key philosophical concepts of object and property Arguably these are two of the most fundamental concepts in metaphysics Nor is it hard to see why If one of the central goals of metaphysics is to uncover what reality is like in and of

itself then a natural starting point is the idea that reality involves two basic kinds of item objects and properties Notably it seems hard to define one without the other objects are things that have or instantiate properties properties are the things that objects have or that are instantiated by objects Both concepts seem to be equally central to the volume's conceptual scheme so much so that it is difficult to express truths about how things stand in the world without implicitly assuming the existence of these two ontological categories Objects and Properties New Perspectives collects original chapters from analytic metaphysicians working on objects and properties to showcase state of the art research and to highlight the diversity of current work in this area The volume offers in depth discussions of debates ranging from grounding and metaphysical explanation to reduction truthmaking pluralism versus monism about material objects intrinsic versus extrinsic properties the philosophy of colour the mind body problem processual views of material objects change modality persistence and composition

The Rational Ontological Argument Joshua R. Sijuwade, 2025-01-23 By developing a new ontological argument for the existence of God Joshua R Sijuwade presents an innovative approach that enriches the existing discourse with fresh insights and a contemporary perspective The ontological argument seeks to demonstrate the existence of God from an a priori standpoint and Sijuwade begins by addressing the substantial critique the modal argument has received He embarks on a rigorous exploration providing needed analysis and a positive iteration termed the Rational Ontological Argument rooted in a novel modal methodology known as Rational Modal Realism Using this new method Sijuwade focuses on demonstrating how the central concepts and theories within modal metaphysics and epistemology such as modal realism modal rationalism trope theory and ontological pluralism offer a means to develop a victorious ontological argument Employing contemporary analytic methods and suggesting productive directions for further research Sijuwade makes a key contribution to philosophy of religion and re invigorates the age old philosophical argument for the existence of God

The Yoga of Love, 2025-05-19 The idea that something can be present at every place has engendered much discussion both in the past and at present Typically omnipresence is thought to be a divine attribute but the question as to how something can be omnipresent has not been historically confined to the status of a divine being The Oxford Handbook of Omnipresence offers an insight into historical accounts of omnipresence and its developments in ancient medieval modern and contemporary thought It further widens the study of omnipresence by including less widely studied strands of thought on this topic from mystical process theological feminist theological and phenomenological perspectives Additionally whilst the study of omnipresence has typically focused on Christian thinkers the volume broadens the range of voices on this attribute further by including Jewish Islamic Buddhist Sanskrit and Donghak accounts The Handbook provides an introduction to the main facets of omnipresence both historical and contemporary and opens up new avenues for research that are yet to be fully explored

Persistence and Spacetime Yuri Balashov, 2010-04-29 How do material objects persist through time and survive change Are they three dimensional entities extended in space or are they four dimensional spacetime worms Balashov shows how the

theory of relativity supports four dimensionalism and in so doing illuminates a wide range of metaphysical issues

Routledge History of Philosophy Volume II David Furley, 2003-09-02 The final volume to be published in the acclaimed Routledge History of Philosophy series provides an authoritative and comprehensive survey and analysis of the key areas of late Greek and early Christian Philosophy *The Instant of Change in Medieval Philosophy and Beyond* , 2018-05-07 Since antiquity philosophers have investigated how change works If a thing moves from one state to another when exactly does it start to be in its new state and when does it cease to be in its former one In the late Middle Ages the problem of the instant of change was subject to considerable debate and gave rise to sophisticated theories it became popular and controversial again in the second half of the twentieth century The studies collected here constitute the first attempt at tackling the different aspects of an issue that until now have been the object of seminal but isolated forays They do so in through a historical perspective offering both the medieval and the contemporary viewpoints Contributors are Damiano Costa Graziana Ciola William O Duba Simo Knuuttila Greg Littmann Can Laurens L we Graham Priest Magali Roques Niko Strobach Edith Dudley Sylla Cecilia Trifogli and Gustavo Fernandez Walker *From Divine Timemaker to Divine Watchmaker* R.T. Mullins, 2024-10-24 This book offers the most extensive exploration of divine temporality to date It focuses on five main questions First what is time Second how is God responsible for the existence of time Third what does it mean to say that God is temporal Fourth what kind of structure might God give to a time series Fifth what are the implications for theological doctrines such as the Trinity creation providence and life after death The author offers a deep critical engagement with the Christian tradition but also goes beyond to build analytic bridges to Jewish Islamic Hindu and Jainist philosophical theology The book provides an up to date discussion of issues within analytic metaphysics philosophy of time and philosophy of religion and draws on the resources of contemporary systematic historical and biblical theology **A Dynamic Theory of Hylomorphism** Jeremy W. Skrzypek, 2025-06-20 This book introduces a novel hylomorphic theory of material objects according to which material objects are understood as comprised or composed of both matter and activity where activity plays the role of form This theory hyloenergeism captures the dynamic nature of many of the objects of our experience such as living organisms better than other leading varieties of contemporary hylomorphism Hylomorphism is the theory according to which material objects are understood as comprised or composed of two fundamental parts components aspects or principles matter and form Many contemporary hylomorphists endorse a version according to which the form of a material object is understood as a certain kind of complex relation or structure realized in its material parts Others endorse a version according to which the form of a material object is understood as a certain kind of power or disposition continuously activated in the object or in its material parts This book argues against structural and dispositional varieties of hylomorphism in favor of a third approach hyloenergeism Drawing on various aspects of traditional Aristotelian hylomorphism and other contemporary occurrence based theories of material objects it argues that hyloenergeism has the resources to successfully

avoid or resolve several major concerns for other competing hylomorphic views A Dynamic Theory of Hylomorphism will appeal to researchers and graduate students working in metaphysics ancient philosophy and medieval philosophy *New Essays on Tarski and Philosophy* Douglas Patterson,2008-09-18 *New Essays on Tarski and Philosophy* aims to show the way to a proper understanding of the philosophical legacy of the great logician mathematician and philosopher Alfred Tarski 1902 1983 The contributors are an international group of scholars some expert in the historical background and context of Tarski's work others specializing in aspects of his philosophical development others more interested in understanding Tarski in the light of contemporary thought The essays can be seen as addressing Tarski's seminal treatment of four basic questions about logical consequence 1 How are we to understand truth one of the notions in terms of which logical consequence is explained What is it that is preserved in valid inference or that such inference allows us to discover new claims to have on the basis of old 2 Among what kinds of things does the relation of logical consequence hold 3 Given answers to the first two questions what is involved in the consequence relationship itself What is the preservation at work in truth preservation 4 Finally what do truth and consequence so construed have to do with meaning *Criminology in criminal justice* Alexandre

Chitov,2022-04-01 On behalf of Chiang Mai University Press editorial team I would like to thank for your interest this book *Criminology in Criminal Justice* by Alexandre Chitov In my opinion the book comes out in the right time In the past few years the global communities have experienced a change in the way in which justice is defined Mainly this comes from social and cultural divides which have affected legal practices in many countries While providing an explanation on foundational concepts and the way in which each concept derive from the author utilizes case studies from many places which help us understand these foundational ideas in criminology in a more critical way I hope that the endeavor in the book would benefit not only law students but also other lay people who are interested in criminology **The Ontology of Spacetime II**

,2008-06-17 The sixteen papers collected in this volume are expanded and revised versions of talks delivered at the Second International Conference on the Ontology of Spacetime organized by the International Society for the Advanced Study of Spacetime John Earman President at Concordia University Montreal from 9 to 11 June 2006 Most chapters are devoted to subjects directly relating to the ontology of spacetime The book starts with four papers that discuss the ontological status of spacetime and the processes occurring in it from a point of view that is first of all conceptual and philosophical The focus then slightly shifts in the five papers that follow to considerations more directly involving technical considerations from relativity theory After this Time Becoming and Change take centre stage in the next five papers The book ends with two excursions into relatively uncharted territory a consideration of the status of Kaluza Klein theory and an investigation of possible relations between the nature of spacetime and condensed matter physics respectively Space and time in present day physics and philosophy Relatively low level of technicality easily accessible Introduction from scratch of the debates surrounding time Broad spectrum of approaches coherently represented
