Image Processing and Computer Vision Masterclass with Python Sandipan Dey, 2025-07-31

DESCRIPTION Image processing and computer vision technologies combined with the rapid advancements in generative AI have become foundational to many modern applications As visual data continues to grow exponentially the ability to analyze interpret and generate images using advanced algorithms and AI is more critical than ever for driving innovation across industries This book provides a thorough exploration of advanced techniques and practical implementations in the field of computer vision This book offers a problem oriented approach that bridges traditional image processing with modern machine learning and generative AI methods This new edition significantly expands into specialized domains with medical

imaging applications using professional libraries like pydicom ITK and nnUNet for clinical diagnosis including COVID 19 detection and brain tumor segmentation plus remote sensing analysis with satellite processing By the end of this book readers will have developed strong practical skills in both classical and cutting edge image processing and computer vision techniques empowered to confidently design implement and adapt solutions across a wide range of real world applications They will emerge with a deep understanding of theory hands on coding experience and the ability to leverage AI and generative models to push the boundaries of visual computing

WHAT YOU WILL LEARN

- Restore and enhance images using classical and deep learning methods
- Segment images with advanced clustering and neural network techniques
- Extract and match features for image alignment and recognition
- Build and train image classifiers with ML and AI
- Learn advanced restoration and inpainting techniques using cutting edge deep learning models
- Explore specialized domain expertise in medical imaging applications using professional libraries

WHO THIS BOOK IS FOR

This book is ideal for undergraduate and graduate students researchers and professionals in computer vision image processing and AI It also serves computer vision engineers image analysts data scientists software engineers and industry practitioners seeking practical hands on expertise using Python

TABLE OF CONTENTS

- 1 Image Restoration and Inverse Problems in Image Processing
- 2 More Image Restoration and Image Inpainting
- 3 Image Segmentation
- 4 More Image Segmentation
- 5 Image Feature Extraction and Its Applications
- 6 Applications of Image Feature Extraction
- 7 Image Classification
- 8 Object Detection and Recognition
- 9 Application of Image Processing and Computer Vision in Medical Imaging
- 10 Application of Image Processing and Computer Vision in Medical Imaging and Remote Sensing
- 11 Miscellaneous Problems in Image Processing and Computer Vision

Data Science Solutions on Azure Julian Soh, Priyanshi Singh, 2024-11-18 This revamped and updated book focuses on the latest in AI technology Generative AI It builds on the first edition by moving away from traditional data science into the area of applied AI using the latest breakthroughs in Generative AI Based on real world projects this edition takes a deep look into new concepts and approaches such as Prompt Engineering testing and grounding of Large Language Models fine tuning and implementing new solution architectures such as Retrieval Augmented Generation RAG You will learn about new embedded AI technologies in Search such as Semantic and Vector Search Written with a view on how to implement Generative AI in software this book contains examples and sample code In addition to traditional Data Science experimentation in Azure Machine Learning AML that was covered in the first edition the authors cover new tools such as Azure AI Studio specifically for testing and experimentation with Generative AI models
