Rethinking Informed Consent in the Big Data Age Adam J. Andreotta, 2024-12-23 In the big data age providing informed consent online has never been more challenging Countless companies collect and share our personal data through devices apps and websites fuelling a growing data economy and the emergence of surveillance capitalism Few of us have the time to read the associated privacy policies and terms and conditions and thus are often unaware of how our personal data are being used This is a problem as in the last few years large tech companies have abused our personal data As privacy self management through the mechanism of providing online consent has become increasingly difficult some have argued that surveillance capitalism and the data economy more broadly need to be overthrown This book presents a different perspective It departs from the concept of revolutionary change to focus on pragmatic incremental solutions tailored to everyday contexts It scrutinises how consent is currently sought and provided online and offers suggestions about how online consent practices can be improved upon These include the possibility of subjecting consent gathering practices to ethics committees for review the creation of visual based consent agreements and privacy policies to help with transparency and engagement the development of software to protect

privacy and the idea of automated consent functionalities that allow users to bypass the task of reading vast amounts of online consent agreements The author suggests that these small scale changes to online consent obtaining procedures could if successfully implemented provide us with a way of self managing our privacy in a way that avoids a revolutionary dismantling of the data economy In the process readers are encouraged to rethink the very purpose of providing informed consent online Rethinking Informed Consent in the Big Data Age will appeal to researchers in normative ethics applied ethics philosophy of law and the philosophy of AI It will also be of interest to business scholars communication researchers students and those in industry

Le sfide etiche dell'Intelligenza Artificiale Piercarlo Maggiolini, Mariagrazia Fugini, 2025-02-25. La tecnologia in generale quella digitale in particolare e ancor più specificatamente l'Intelligenza Artificiale può essere vista come un farmaco nel senso greco della parola e cioè a seconda dei casi e a volte nel medesimo caso vedi quello oggi clamoroso dell'Intelligenza Artificiale generativa con ChatGPT una medicina un farmaco appunto e o un veleno. Nel caso delle tecnologie per diversamente dai farmaci stato molto raro che si parlasse dei rischi dei pericoli delle controindicazioni degli effetti decisamente negativi che avrebbero potuto produrre almeno in certe situazioni. Di

solito si aspettato che questi si producessero restandone più o meno sorpresi e spiazzati per poi cercare di correre ai ripari. Stranamente con l'Intelligenza Artificiale sta avvenendo il contrario. Con un'autentica corsa allarmata di scienziati, operatori economici, istituzioni pubbliche nazionali e internazionali a cercare di prevenire i possibili ma ampiamente temuti effetti negativi collaterali o addirittura voluti dell'IA tale per cui si è levato un coro davvero inusuale per invocare regolamentazioni e autoregolamentazioni che minimizzassero questi rischi, pericoli se non addirittura disastri. Importante capire perché sta succedendo questo. Il presente libro inquadrando nella più generale esigenza di una nuova etica, un'etica digitale e nell'epocale trasformazione della trasmissione del sapere che stiamo vivendo, illustra dettagliatamente con numerosi esempi le principali sfide etico-sociali dell'Intelligenza artificiale soffermandosi con un focus particolare su quelle particolarmente critiche proprio dal punto di vista etico e sociale delle applicazioni in medicina, illustrando i tentativi in corso per affrontarle.
