

What happened?

Michael was playing video games in his bedroom. Then, he suddenly heard an explosion nearby. He ran to the kitchen as soon as he could. He looked shocked and scared. He told his parents that he heard that explosion. His dad went outside as fast as he can, and he saw fire nearby. He called the fire station department and they arrived quickly as fast as they can. The fireman found out that the neighbour was injured, and they called the ambulance immediately. The ambulance came to the area very fast. They found the neighbour and went to the hospital. Three days later after the explosion, the neighbour had 35% of skin burn. Michael and his family were worried about the neighbour because he was so helpful and friendly. The whole family went to the hospital to look up for the neighbour. After finding the neighbour, the neighbour told the family that his dog played with his oven when jumping. The neighbour's dog died after the fire explosion. "We will help you," the family said. The neighbour thanked the family. 12 days later after the explosion, the family began to rebuild the house, and the neighbour is healthy again. Now, the neighbour's dog is dead sadly. Kroll,2014-05-12 The past fifteen years have witnessed an increasing interest

in the cognitive study of the bilingual A major reason why psychologists psycholinguists applied linguists neuropsychologists and educators have pursued this topic at an accelerating pace presumably is the acknowledgment by increasingly large numbers of language researchers that the incidence of monolingualism in individual language users may be lower than that of bilingualism This alleged numerical imbalance between monolinguals and bilinguals may be expected to become larger due to increasing international travel through for instance tourism and trade to the growing use of international communication networks and to the fact that in some parts of the world i e Europe the borders between countries are effectively disappearing In addition to the growing awareness that bilinguals are very common and may even outnumber monolinguals there is the dawning understanding that the bilingual mind is not simply the sum of the cognitive processes associated with each of the two monolingual modes and that the two languages of bilingual may interact with one another in complicated ways To gain a genuinely universal account of human cognition will therefore require a detailed understanding of language use by both pure monolinguals as well as bilinguals unbalanced and balanced and of the representations and processes involved These two insights that bilingualism is a common human condition and that it may influence cognition were presumably instrumental in putting bilingualism on the agendas of many researchers of cognition and language in recent years But other reasons may have played a role too The study of bilingualism also provides a unique opportunity to study the relation between language and thought A final reason for the growing interest in this area of research is the awareness that bilingualism may confer the benefit of broadening one s scope beyond the limits of one s own country and culture This book serves as an excellent introduction to the important topics in the psycholinguistic study of bilingualism The chapters represent a comprehensive and interrelated set of topics that form the core of contemporary research on the psycholinguistics of bilingualism The issues raised within this perspective not only increase our understanding of the nature of language and thought in bilinguals but also of the basic nature of the mental architecture that supports the ability to use more than one language
