

LUBRICATION

REAR AXLE (B)

Access to the level and filler plug is gained from underneath the car. A square-headed drain plug is fitted in the base of the differential housing and its hollow center must be cleaned before it is replaced and tightened. The oil should be drained from the rear axle after the first 500 miles (800 km.). The axle must then be filled with one of the hypoid oils indicated on page 64, Ref. B, to the level of the filler plug. Approximately 2½ pints (85 liters) of oil are required to refill the axle. The level should be checked at intervals of 1,000 miles (1600 km.) and replenished if necessary.

Note.—It is essential that only Hypoid Oil be used in the rear axle. The axle should be completely drained and then refilled with fresh lubricant of the correct grade every 5,000 miles (10,000 km.).

PROPELLER SHAFT (D)

The two needle-type universal joints should receive grease gun attention every 1,000 miles (1600 km.).

The recommended lubricants are indicated on page 64, Ref. D.

Access to the rear universal joint nipple is gained from underneath the car.

The sliding joint does not need attention, since it is automatically lubricated from the gearbox.

LUBRICATION

FRONT UNIVERSAL JOINT (D)

The lubricator for the front universal joint is indicated by the arrow. The grease gun, filled with one of the greases indicated on page 64, Ref. D, should be applied to it every 1,000 miles (1600 km.) and given three or four strokes.

THE STEERING GEAR (D)

Grease nipples are provided at the top and bottom of each swivel pin. The grease gun should be filled with one of the greases indicated on page 64, Ref. D, and applied to the nipples every 1,000 miles (1600 km.). Three or four strokes of the gun should be given, and where the car is used in dusty conditions greasing every 250 miles (400 km.) is recommended.

STEERING GEARBOX (D)

A lubrication point is also provided on the rack housing, and this is accessible when the carpet above the gearbox cover has been turned back and the rubber plug removed. This nipple should be used to replenish the rack assembly with oil to Ref. B, page 64, every 12,000 miles (20,000 km.). Avoid overfilling the steering gearbox. Give not more than ten strokes.
