Moscow Mathematical Olympiads, 2000-2005 Roman Vasil'evich Fedorov, Silvio Levy, Alexander Kovaldzhi, Ivan Yashchenko, 2011-09-13 The Moscow Mathematical Olympiad has been challenging high school students with stimulating original problems of different degrees of difficulty for over 75 years. The problems are nonstandard solving them takes wit thinking outside the box and sometimes hours of contemplation Some are within the reach of most mathematically competent high school students while others are difficult even for a mathematics professor Many mathematically inclined students have found that tackling these problems or even just reading their solutions is a great way to develop mathematical insight In 2006 the Moscow Center for Continuous Mathematical Education began publishing a collection of problems from the Moscow Mathematical Olympiads providing for each an answer and sometimes a hint as well as one or more detailed solutions This volume represents the years 2000 2005 The problems and the accompanying material are well suited for math circles They are also appropriate for problem solving classes and practice for regional and national mathematics competitions In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents and teachers and the mathematics profession Titles in this series are co published with the Mathematical Mathematics via Problems Mikhail B. Skopenkov, Alexey A. Zaslavsky, 2023-11-17 Sciences Research Institute MSRI This book is a translation from Russian of Part III of the book Mathematics via Problems From Olympiads and Math Circles to Profession Part I Algebra and Part II Geometry have been published in the same series The main goal of this book is to develop important parts of mathematics through problems The authors tried to put together sequences of problems that allow high school students and some undergraduates with strong interest in mathematics to discover such topics in combinatorics as counting graphs constructions and invariants in combinatorics games and algorithms probabilistic aspects of combinatorics and combinatorial geometry Definitions and or references for material that is not standard in the school curriculum are included To help students that might be unfamiliar with new material problems are carefully arranged to provide gradual introduction into each subject Problems are often accompanied by hints and or complete solutions The book is based on classes taught by the authors at different times at the Independent University of Moscow at a number of Moscow schools and math circles and at various summer schools It can be used by high school students and undergraduates their teachers and organizers of summer camps and math circles In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life SLMath formerly MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents and teachers and the mathematics profession Moscow Mathematical Olympiads, 1993-1999 Roman Mikhailovich Fedorov, Silvio Levy, 2011 The Moscow Mathematical Olympiad has been challenging high school students with stimulating original problems of
